

Many English Girls Still Hold Their War Jobs

The shortage of male labor in England is responsible for the vast number of factory jobs that are being monopolized by female help. Many of the industries which were run by women during the war are still under the control of the fairer sex. This photograph shows three English girls who have become efficient workers in a glass factory.

Bicycle Airplane Is Latest

Pedestrians on the Bois de Boulogne, Paris, were startled out of their usual placidity recently, when this odd-appearing contraption was introduced to their eyes. Close inspection proved it to be merely a bicycle with airplane appendages, built to fly. It made its successful flight while the astonished Parisians looked on. This latest development in the motor industry will no doubt be a popular vehicle. It is called the aviette.

California Objects to These Girls

Here are some of the "picture brides," just arrived from Japan, who were questioned in San Francisco by the congressional immigration committee that has been inquiring into California's complaints against Japan. Scarcely any of the girls questioned had seen the men they came to marry. It was said this might be the last lot of "picture brides" to arrive in America.

Boat That Dashed Lipton's Hopes

The Bristol yacht Resolute, which successfully defended the America's cup against Lipton's Shamrock IV, photographed as she was crossing the finish line in one of the races. The Resolute lost the first two races of the series and then won three straight. Sir Thomas says he will try again in 1922.

IN A FIREMEN'S SCHOOL

In order that the Chicago fire department may retain its efficiency, the local fire officials have been conducting a school to instruct the members of the department in the use of all the equipment with which a modern fire department is fitted. The photograph shows Chief Carmody showing a fireman how to use a rescue apparatus.

PANAMA'S GIRL DIVER

Little Miss Constance Sunquist, nine-year-old Panama canal zone girl, who swam the Culebra cut of the canal with her hands and feet tied. At the age of six she made a 34-foot dive in the Balboa swimming pool.

EDITH ROBERTS

Edith Roberts is among the most experienced of the "movie" stars; although only twenty-two years old she has been with one producing firm since 1912. She started as a child actress.

ALWAYS AT IT.

I saw her on the train—
Sittin' Knittin'.
She had stitches on the brain—
Sittin' Knittin'.
It was not a sturdy sock
For some member of her flock,
But some dido for a frock—
Sittin' Knittin'.

Never saw her but she was
Sittin' Knittin'.
Guess that's all she ever does—
Sittin' Knittin'.
Bet you when her hair is hoary
And she's tatted home to glory,
It will be the same old story—
Sittin' Knittin'.

Evil.

Evil is what the love of money is the root of.

The root is the lowest part, of course. There is less unanimity of opinion as to what is the height of evil.

If everything else thrived as well under opposition as evil does, this would be a far different world.

Evil is also what men do that lives after them, if Bill Shakespeare is to be depended on.

Somebody a long time ago labeled a lot of things "evil" and we have stuck to the labels pretty faithfully.

But most of the things they marked "evil" should have been placarded "foolishness."

People who exercise all the intelligence they have do nothing that is really evil.

And they have a fine time, with no big heads or next mornings or other popular brands of hang-over.

Most of the time when we ask, "Is it right?" we could get the answer more suddenly if we said:

"Is it intelligent?"

Many things once labeled evil are not so.

We were brought up to believe that card playing is evil, intrinsically.

Also dancing—gee, whiz! Dancing was the worst thing there was!

Murder was a Sunday school exercise compared with it.

If one plays cards when one should be and could be doing something helpful and necessary, it is wrong.

So would corn hoeing or onion weeding be, if you were neglecting something more important for it.

Ditto dancing.

Although we do believe it wrong for anybody to do it as badly as we do.

A dancing teacher told us so, once. This isn't all we know about evil.

But it's all we're going to tell here.

What the Sphinx Says

By NEWTON NEWKIRK.

"Honesty among a certain percentage of business men went out of fashion with the minnet."

OUTBREAK OF TRUE ARMY WORM HAS BEEN DETECTED IN SOUTHERN AREAS

The True Army Worm and its Destructive Work.

In the long battle against insect enemies, the bureau of entomology, United States department of agriculture, serves as the farmer's "listening post" to give due warning of an impending raid from the enemy. An outbreak of the true army worm has been detected in southern Illinois, and also in southern Missouri, and the scientists are making every effort to give information upon the control of this pest.

Parent or Moth of True Army Worm. (Enlarged.)

It is expected that the worm will appear in the sections lying north and northeast of the area infested at present. Probably this will occur within a short time, and farmers are urged to be ready with their defense.

Control of Pest.

Just what this defense should consist of is fully described in Farmers' Bulletin 731, which the department will send free upon request, to any interested person. Briefly, the control

of the pest is effected by means of poisoned baits, poisoned sprays upon crops not intended to be used as forage, and by the construction of ditches and traps where the masses of caterpillars can be caught and crushed with a log drag.

For the next three months the fields of growing grass and grain must be watched carefully and, when the worm is discovered, the attack should be pressed with utmost vigor to prevent the pest from fortifying his position. Once entrenched the army worm will claim a large slice of farm profits for his indemnity—millions of dollars have passed down the greedy maw of the army worm in the past 30 years.

Markings of True Worm.

The true army worm should not be confused with the "overflow worm," or the "grass worm," say the federal entomologists. The genuine article is a nearly naked, smooth, striped caterpillar about one and one-half inches long. His greenish body is marked with three dark stripes which run, one down each side and one down the back, for the length of the body. The head is greenish brown, speckled with black.

The army worm operates in masses, and from this characteristic he derives his name. When large numbers of them are at work in a field the clumping sound of their moving jaws can be plainly heard as they devour every blade in sight.

PROTECT COTTON TO PREVENT MUCH LOSS

Damage Amounting to \$70,000,000 Done in Past Year.

Although One of Hardest of Farm Products, Its Strength Is Not Sufficient to Withstand Exposure to the Elements.

What would you say if you saw a man deliberately destroy \$70,000,000 worth of clothing by placing it in a rainstorm? No one has done precisely that, but what has actually occurred is no less wasteful than that act would be.

Specialists of the bureau of markets, United States department of agriculture, conservatively estimate that during the past year cotton growers of the United States suffered a \$70,000,000 cotton loss through damage to cotton by exposure to weather. They say, that after ginning, cotton is permitted to remain in the weather

American Cotton in Damaged Condition on Arrival in England on Account of Improper Wrapping.

for months at a time instead of being properly sheltered, and that although cotton is one of the hardest of farm products, its strength is not sufficient to withstand such exposure to the elements.

The bureau of markets maintains that the amount of money lost through this cause in a single season would probably be sufficient to build the warehouses needed, and that after the first year these warehouses would become practically surplus assets in the hands of the farmers.

It is also pointed out that receipts covering cotton stored in properly operated warehouses are accepted generally as collateral for loans, the interest charges for which are more than paid for by the profits accruing to the farmer through his ability to sell his cotton as it is needed by the mills.

RAISE CHICKENS FOR MONEY

Incubator Has Revolutionized Industry and Made It Worth While for Every Farmer.

Poultry raising was never given much consideration by anyone. Quite a contrast with what is being done now by the government, agricultural colleges, experiment stations and various other institutions in behalf of the humble hen. The incubator has revolutionized this business of raising chickens and has made of it a business worth while.

PROTECTION FROM FLIES

The following remedy is said to afford horses, dogs and cows absolute protection from flies.

Pennyroyal, 1 ounce; alcohol, 2 ounces; fish oil, ½ pint. Mix in a bottle and shake well before using. Apply lightly to the animal's coat each morning and for 24 hours it will be immune from flies. Be careful to apply the preparation lightly, as it will stiffen the hair. One bottle will last a summer for a horse. Any drug store can supply the ingredients.

CULLING OF POULTRY FLOCK

Intelligent Work Is Essential for Success, Say Specialists—Best Fowls to Save.

Intelligent culling of the poultry flock is of the utmost importance for success in poultry keeping, say specialists of the department of agriculture.

Cull These Hens.

Sick, weak, lacking vigor, inactive, poor eaters, early molters with small, puckered, hard, dry vents; with small, shriveled hard, scaly, dull-colored combs; with thick or coarse, stiff pelvic bones, that are close together, small spread between pelvic bones and rear end of keel, and hard, small abdomen. In breeds with yellow skin and shanks the discarded hens should also show yellow or medium yellow shanks and yellow beaks and vents.

Save These Hens.

Healthy, strong, vigorous, alert, and active; good eaters; not molting or just beginning to molt in September or October; with large, moist vents; with full, red combs; thin, pliable pelvic bones well spread apart, wide-spread between pelvic bones and rear end of keel, and large, soft, pliable abdomen. In breeds with yellow skins and shanks, the hens saved should also show pale or white shanks, and pale or white beaks and vents.

FIX HARVESTING MACHINERY

Mighty Good Investment of Time to Spend Rainy Day in Putting Implements in Shape.

A rainy day spent in putting that mowing machine, hay loader, binder and other harvesting machinery into shape is a mighty good investment of time. This is more true this year than usual for two reasons—first, labor is much scarcer, and therefore the loss of any time wasted will be greater, and, secondly, the parts may be harder to get than usual, due to a shortage of supplies in many lines. Forethought may save some after-worries.

PLACE FOR HORSES TO ROLL

Best Plan to Let Animal Out to Each Day—Rolling Adds to Its Health and Vigor.

Where horses are closely confined in stalls most of the time, they are more apt to roll in the filth and manure than if they had been taken out and allowed to roll once a day. Letting them roll outside of stalls saves much currying and brushing, avoids the possibility of the animal rolling where it would get fast, and adds to its health and vigor by keeping it cleaner.
