In 6 parts, featuring Theda Bara. Don't miss this good one. 10 & 15c.

BRAVE GIRL WON A FORTUNE

(continued from page 1)

Now that the message had been sent, what was I to do? Stand there covering the man till the train came along? I had been able to save the train; I was not equal to saving myself. I felt a buzzing in my ears, and that was all I knew for an interval; then, coming to myself, what was my relief to find the station empty!

Rising, I tottered to the instrument and called the station below. The dispatcher, angry that I had made no reply to his message, began to berate me for being away from the station. As soon as I could stop him I told him what had occurred. Since the man who had left me knew that I had dispatched a warning it was decided that the danger had passed. Then the train came on slowly, but with all hands armed, reaching the station without interruption. It was lucky, however, for the story I had told, that they found material gathered for a barrier, which had either not been made or taken down when it was learned that the plan to rob the express safe was a failure. When the train pulled up at the station every man aboard rushed into my office to see the girl who had covered a desperado with one hand and sent a message with the other. They found her lying on the lounge in a paroxysm of tears.

Well, the next day I sent in my resignation, stating that the work was too hazardous to suit me. I received a reply to go to the city and report at the office of the president. I found most of the directors assembled to meet me, and it was plain that I was a curiosity. I was presented with a check for \$10,000, which the president, when we were alone together, asked me to permit him to invest for me. I consented, and the investment made me independent.

SCIENCE—INDUSTRY.

Radium Never Seen In Nature.

Radium is a metal and is described as having a white metallic luster. It has been isolated only once or twice, and few people have seen it. Radium is ordinarily obtained from its ores in the form of hydrous sulphate, chloride or bromide, and it is in the form of these salts that it is usually sold and used. These are all white or nearly white substances, whose appearance is no more remarkable than common salt or baking powder. Radium is found in nature in such exceedingly small quantities that it is never visible even when the material is examined with a microscope. Ordinarily radium ore carries only a small fraction of a grain per ton of material, and radium will never be found in large quantity, because it is formed by the decay of uranium, a process which is wonderfully slow, and radium itself decays and changes to other elements so rapidly that it is impossible for it to accumulate naturally in visible masses.—United States Geological Survey.

Uses of Chromium.

Chromium is a metal which when alloyed with steel gives to it hardness and toughness that make it useful in the manufacture of automobile steels, armor plate, armor piercing projectiles, the shoes and dies of stamp mills and tires for rolls used in crushing ores, tool steels and in other steels to which it is desired to give hardness and toughness. The huge orders placed in this country for war materials have not only resulted in a great demand for chromium steels to be used directly for purposes of war, but have led to the increased manufacture of special steels for cutting shells, rifle barrels and other instruments of war and are reflected in increased metal mining and greater consequent use of chromium steels for crushing machinery.—United States Geological Survey.

To Make Liquid Glue.

Soak one pound of good strong glue overnight in one pint of cold water. The next morning dissolve the glue on a water bath by applying heat, says the Blacksmith and Wheelwright. When the glue is melted add four ounces of dilute nitric acid or strong acetic acid. Or soak one pound of strong glue overnight in one quart of cold water. The next morning dissolve the glue on a water bath by applying heat. Dissolve three ounces of sulphate of zinc in half a pint of hot water. Pour this solution into the melted glue, stir and when the mass becomes nearly cold stir in two fluid ounces of strong muriatic acid.

About Piston Rings.

Broken piston rings will make themselves known by decreased compression and by an excessive amount of oil in the combustion chamber and on the spark plugs.

The Monitor always leads.

10c. a Button, \$1 a Rip

Dutchess Trousers are are so well made that the firm makes the above statement. There probably is no better pants made than the Dutchess.
