

TRACK MEET

Of Amateur Athletic Union to be held at Astoria.

Astoria, Ore., May 4.—What promises to be the greatest track meet ever held under the auspices of the Pacific North-west Association of the Amateur Athletic Union, is billed for the Astoria Centennial Celebration, when the annual championships are decided during the last week in August, most likely August 26. At least 50 of the best athletes in the north-west will be present from the various clubs, while a relay race open to every high school in the State is planned by the Centennial Athletic Committee, a handsome silver cup being given as the prize. Gold and silver medals will be allotted the winners in the various field and track events in the amateur championships.

T. Morris Dunne, Secretary of the P. N. A., who resides in Portland, is doing much to help along the Centennial Meet. Originally it was planned to hold the annual athletic championships on Multnomah field in Portland, but that was found impracticable on account of the recent fire, which destroyed the club house and grand stand. Multnomah very generously turned the meeting over to the Astoria Amateur Athletic Club, which will be responsible for its success this year. Secretary A. Guillaume of the Astoria Club is co-operating with Mr. Dunne in securing the best athletes in the northwest to attend.

How Deserts are Formed.

There is a popular idea that deserts like the Sahara are the bottoms of ancient seas which have been lifted above their original elevation by geological forces. This notion is an erroneous one. It is absolutely certain high authorities contend, that the sands of all the great deserts have been formed on the spot by the disintegration of the solid rocks on which they rest. Desert sands correspond in all respects, so far as their mode of origin is concerned, to the dust and sand that accumulates on our high roads in summer. All deserts are situated where the winds from the ocean, before reaching them, are exhausted of their moisture by passing over mountains or across extensive tracts of land.—Scientific American.
