Why Milk Sours.

We are told by those who study the ways and ravages of the mischievous microbe that he is very fond of sugar and that he delights to gratify this liking by turning the supply in milk into an acid which sours the milk. These microbes are constantly in the air, alive though invisible, and ready to drop into the milk when they can. If it were possible to keep the milk from the air after the cow is milked it would not turn sour. Warm milk is particularly inviting to the microbe and favorable to his operations. He does not get along well under chilling conditions, and that is why the sweetness of milk can be preserved if it is kept cold. Boiling fresh milk changes the sugar in such a way that the microbe cannot feed upon it.—Baltimore American.

Precious Manuscripts.

Considered one of the finest manuscripts in this country, the "Evangelistarium sive Lectiones ex Evangelis," illuminated and of French-Carolingian origin, may be seen in the New York Public Library. The manuscript is of vellum and consists of 200 leaves. Its date is set in the neighborhood of 870 A. D. The late twelfth and thirteenth centuries are also represented, and among the works from the fourteenth century is the oldest extant complete manuscript of the Wycliffite version of the New Testament in English.—Argonaut.

There's a Reason For Everything.

"Wouldn't you try to get a divorce from a woman who abused you and neglected your home and thought more of her club than she did of you?" thundered the big man. "I don't think I would," replied Henry Peck. "I am afraid Henrietta would not let me."—Philadelphia Ledger.

Coral Builders.

Coral reefs and islands are formed by the coral building polyp. These animals only live in clear water, the depth of which is not greater than twenty-five fathoms, and the temperature of which does not sink below 68 degrees F.

The Secret.

"This is very confidential, Marian." "Yes, dear. I shall be most careful to whom I repeat it."—Philadelphia Ledger.

He who did well in war just earns the right to begin doing well in peace.

In Awful Shapes. "Why don't you go to work?" "I'm so dead tired of doing nothing that I'm too tired to do anything."—Cleveland Leader.

Fly Rod For Trout Fishermen.

Rods of split bamboo are produced by cementing together a number of triangular strips split from the whole cane to form each joint; the rod of six strips is the choice of most anglers. Within reason, the lighter the rod the better—split bamboo rods are stronger and have more casting power and better action than rods of any other material. Very properly conceding that the choice of a fly rod is practically limited to the rod of split bamboo, you cannot go far wrong in selecting one nine feet in length. Such a rod for the light work of our average trout streams should not weigh over five and a quarter ounces.

It is very well when making your selection to try out several rods answering to the above specifications, in order to avoid, if possible, getting a rod that is either too stiff or too flexible.—Outing
