## ANOIENT AMERICA.

Dr. J. M. Peebles, in a recent lecture in 8an Francisoo upon the above subject, took oeossion to say that his face once crimsoned in Egypt when asked by a acholarly native engaged in the Cairo Museum how the buried and half-buried cities of Central America and the pyramidal ruina of Yucatan and mouthern Nexioo compared with thoee of Egypt. The lesson was: "Visit and atudy the wonders of your own country before traveraing foreign landa." The speaker pronounced the railroad from Vera Cruz to the City of Mexico a aplen. did apecimen of engineering. The Aztee Anahuac, the vale of tho Monterumas, has an area of nome 600 square miles. It was the sunny hotme of the old Astecs. The Aztec and Toltec relies preserved in the City Museum of Mexioo were intensely intereating, insamuch as they eatablished the fact of maritime relations and inter-oceanio interoourse between the Tolteci and the Pheenicians and Egyptians. As the Lamentian rocks, far to the north of us, consti-
respocta equaled if not exeellod us. The Aateos conguered the Talteca asd then adepted more or lens of their arte and selences. The calendar atone that now rests against the side of the Roman Catholic Cathedral in the City of Mexico is a Toltee rather than an Axtec production. Is it asked, 'Who were the Toltecs!' They were the descendants of the Nahuas, and this wan a conglomerate nationality, made up of the autochthonic races and the remanats of those who peopled the Atlantis Isle. Travaling in Yucatan is harilly aafo and very inconvemient. Merida, the capital, has but one hotel, and that is kept by a 8 paniard. It is 65 miles from Merida out to Uxmal. The Maya Indians in these regions are friendly, bat the monthern tribes are warlike,"

Fanm Live, - A writer in Seribner's Magosime asserts that the farmer, having the mont sane and natural oecupation, onght to find life pleasant. He alone, atrietly speaking, has a home. How can a man take root and thrive withont land? He writes his history upon his fleld. How many ties, how many recoursen ho has; his

## CLEOPATRA'S NERDLR

The recent diffieulties coseerning the oboliak which the Khedive of Rgyt prevented to Americans, had ite origin in the naturnl dislike of the Eigyptians to the diamantling of their country of works of art The Yowng Ryyp, published at Alexandria, is Arabie and Freneh, expreases its sentimenta is the following masi. ner:
"America is making preparations to take away from us the sele obelisk of Cleopatrs which we now posees. This news astosialias us, and we cannot believe that it is true. This monument belongs to the coentry, and no one ean dispose of it withent the authoriastion of the nation. If this be allowed, we may fiad nome day that the pyramids are tranaformed into stoue quarries and used for hailding hoases The time has come when more attention shonld be given to the preservation of our

tate the oldent range of rooks in the world; as Cholula is considered the oldest pyramidal atructure known, why may it not be true that this is the old world, and that the Egyptians learned pyramid building from the aucient Americans of this continent! "I saw," asid the speaker, "carved upon templed ruias in Yuca: tan, hawke' and other bircte' heade similar to those upon the temples, tomis and obeliaks of Egypt, Among the ruins of Uxmal and Palenque I saw the carved crose nad the same phallie symbole no conmmos in India, Phonicia and the East; and 1 further saw the chiseled serpent, the innmmy chaped aaroophagus, the wingei rod sad the lamp immortal, so frequently seen in Egyptian tombis and templos. Few men of revearch doubt the existence and ninking of the Atlantis Ifles doubt that there wre commer cial relatious in anaient times between this country, Tolteca probably, and the old nations of Burope and Asia Strabo, living lefore Christ, enid 'that the art of nightrailing was taught in ancient Tyre.' This indicates, knowiel ge of the marinan' compase Pomilly the necood eapedition sent out by Necho II, at avilent Kgyptian hing, renched this contikent. Tho first expedition of this hing seiled down the Indian ooesa, doubled the Cape, and entered

Iriendahip with catlle, his team, his dog, hie isristio wealth, and more respest seounted to treen; the satisfaction in his growing erops, in hin improved fielde; his intimacy with natars, with bird and beath, aud with tho quicksoing elemcital forces: his co-operations with the clouis, sus, reacons, hest, wind, rain and frost. Nothing will take the various social diatempers, which the city and artifleial life breed, ent of a which the caty and -like direct and loving con. tact with the ooli. It drawn out the pereos.
