

# ASTROLOGY IS ELEMENT-ARY

Long before Netflix or the electric light, our ancestors turned to the heavens for their entertainment. The Sun, the moon, and stars became their TV and over time they got good at channel surfing. The ancients also enjoyed a good plot line, so intricate mythologies were spun to describe each constellation and like any episode of the OC, they were jam-packed with plenty of intrigue and loads of drama. Eventually this sky drama was brought down to earth in the form of the 12 sign zodiac, and imbued with the four elements of terra firma: Fire, earth, air and water.

**FIRE** is life's spark and fire signs are hot, sassy, frisky and free. These firebrands want freedom to do what they please, but if they get the hots for someone, especially another fire sign, they are the quickest to shack up (think U-Haul gals).

Aries is the first fire sign, and they hit you with a pow! They're fearless pioneers who can work a crowd. When Elton John came out publicly, it damaged him, but he kept coming back like a refurbished jet. These guys have an assertive, masculine streak, and even the ladies look good in tight jeans.

Leo is next, and they seem to draw you to them like cold hands to a warm hearth or a flat screen TV during premier week. They're arduous lovers and very loyal. Delta Burke is one Leo cat who fought tooth and nail for LGBT rights, not just for her fans but also for her lesbian sister.

Sagittarius is the most restless fire sign. They're half horsey so they need wide open spaces. They crave travel and adore hobnobbing with foreigners. They're uncomfortable in their own shoes (unless they're dancing)

and want to try on your moccasins. SAG award winner Felicity Huffman easily slipped into the shoes of a pre-op transgender woman in the film *Transamerica*.

**EARTH** is stable, cautious, practical and surprisingly sensual. It takes time for earth signs to be intimate, but once you go out with them you become their property. What these folks lack in PDA's, they make up for in practical ways like fixing your water heater.

Earthy Taurus is pretty stubborn, but luckily they're huggable, snuggable and squeezably soft. This sign is packed with gay icons like Cher, Babs and Grace Jones, along with "King of Trash" John Waters.

Virgo is a nervous earth sign that seems like a canary in the coal mine with regard to the latest flu bug or elevated pollen count, but they are extremely smart and meticulous in how they look after you. Lily Tomlin is my fave Virgo/Lesbo combo.

Capricorn is a rags-to-riches sign that contains one of the biggest fag hags. Dolly Parton says she loves makeup so much that if she were born a man, she'd be a drag queen. David Bowie has some sugar too.

**AIR** is the intellectual element that focuses less on practicality and more on possibility. These signs are fun talkers and extremely bright. They relate to anyone and make you feel comfortable just being you. They seem so relaxed in social settings that coming out for them might seem like a breeze.

Gemini is the "double your pleasure, double your fun" air sign that makes you giggle to tears, but sometimes their bad twin spoils the fun by eating too many Jell-O shots. Boy George has been down that road.

Airy Libra tries to cultivate harmony and find a life partner all in one fell swoop. Their ruler Venus makes them look good (just think of your
