

MY WIFE'S NAGGING PAID FOR OUR DAUGHTER'S FIRST CAR

HEARMYCLAIM

5 IMPORTANT MESSAGES FOR INDIVIDUALS WITH LONG TERM WORKPLACE NOISE EXPOSURE

1. Industrial deafness is not well understood

Working in a noisy job for a prolonged period of time commonly leads to a condition known as industrial deafness. Industrial deafness **affects high frequency sounds** like a woman or child's voice. This condition is not only **frustrating** for you and your spouse, as you **struggles to communicate**, but also is the cause of much tension in noisy situations, like the grandchildren playing loudly and being in a crowded room. Industrial deafness is a gradual onset injury that is typically incurred over many years. Given its gradual onset nature and the fact that low bass frequencies (such as a man's voice) are not affected, many injuries go unnoticed. Therefore, selective hearing may well be due to being unable to hear certain frequencies and not a case of ignoring you.

2. Government laws have been created to compensate individuals with industrial deafness

HearMyClaim has secured compensation for thousands of individuals injured in this way. This compensation has been received for individuals still working and long retired. The majority of individuals helped by HMC were completely unaware of their entitlements. In addition to financial compensation, **leading edge hearing device technology, worth thousands of dollars** has been received for free by injured workers. The devices that we help our clients win, represent the **best technology for treating the industrial deafness condition**.

I am very happy with how they run their business and I think that anyone can benefit from their services. I am particularly happy with the amount of compo I have received. It came in very handy as I have finally managed to replace my old car.

3. Consequences of untreated hearing loss such as industrial deafness

There are 3 serious risks associated with untreated hearing loss: **Auditory deprivation** is a condition where unstimulated hearing ability can result in the loss of being able to hear certain frequencies ever again. Medical studies have linked the **early onset of dementia** with untreated hearing loss. Conversely treated hearing loss as the best prevention. **Depression** through social isolation is prevalent with individuals suffering industrial deafness.

4. Industrial deafness entitlements are provided for individuals still working and long retired

In addition to currently exposed individuals, HearMyClaim has helped many industrial deafness sufferers who left a noisy job many years earlier.

5. Is it difficult?

No. HearMyClaim makes claiming **EASY** - Find out more.
