

BIG POWER for BIG AUTOMOBILES

You selected your car carefully for quality. Select your motor fuel the same way. It's unfair to feed a good car an inferior gasoline.

"Red Crown" answers completely the automotive engineer's demand for a motor fuel that will vaporize rapidly and uniformly in the carburetor and explode cleanly in the cylinders. All the heat units it contains are converted into power at the drive wheels.

"Red Crown" is uniform in quality—every gallon is the same, wherever and whenever you buy it.

Fill at the Red Crown sign—at Service Stations, at garages, or other dealers.

Preserving time — and a cool kitchen

Make canning time a real pleasure this year by using a good oil cook-stove. It concentrates a steady, controlled heat directly under the utensil. Your task is shortened and your kitchen is kept cool, clean and comfortable.

To insure best results, use only Pearl Oil—the clean-burning, uniform kerosene—refined and re-refined by a special process.

Sold by dealers everywhere. Order by name—Pearl Oil.

Airplanes' Good Record.
Probably the most remarkable thing about civil aviation in the past year has been that not one passenger has been killed, or even seriously injured, in a British airplane throughout 1921. And this, although during the summer, between 400 and 500 people a week were crossing the channel by air, and although well over 1,000 a week were being taken up for joy rides in this country. For this we have to thank not only the skill of the pilots and airplane mechanics, but the aeronautical inspection department and the controller of aerodromes and licenses, who have made sure that only first-class men and machines have been allowed to carry passengers.—London

Still More So.
"Here is a queer piece in the paper," said Mrs. Johnson, in the midst of her reading. "It says that in Africa they have a home brew that one drink of it makes 'em walk backwards. Do you s'pose that's true?"
"I reckon likely," replied Gap Johnson of Rumpus Ridge, Ark. "Gabe Gawkey took a horn or two of home dry licker in town t'other day, and two, three hours afterwards I seed him about half way home, laying on his back in the middle of the big road, drawing up first one foot and then the other, and singing 'Climbing up the Golden Stairs.'—Kansas City Star.

WILL DEVELOP JET INDUSTRY

Company Formed to Work Large Deposits Recently Found in Wayne County, Utah.

What is believed to be the first jet deposit to be developed in the United States is now being successfully mined in Wayne county, Utah, where recently mineralogists discovered the largest commercial body of the mineral known to exist in the world. Singularly, discovery of the jet was accidentally made by a party of miners engaged in assessment work for a copper company. The work of mining the jet began late in the summer of last year and, with financial backing assured, is expected to develop into great proportions.

At the present time the work of mining the mineral is more or less crudely done, but it is the intention of the owners of the decidedly valuable deposits soon to install modern machinery and develop the industry into the largest of its kind in the world.—Baltimore American.

Smoking at Washington.

The Japanese were the most incessant smokers of all the visitors to the conference on limitation of armaments, said a newspaper man who attended the meetings. Baron Kato seldom is seen without a cigarette, and quite frequently lights one with another. Prince Tokugawa does likewise, while the diminutive Mr. Dubouché is never seen without a cigarette. Mr. Hanhars is more temperate in his use of the weed. There was never any prohibition about smoking in the Japanese conference rooms. Mr. Hughes prohibits smoking when the correspondents gather. They park their partly smoked weeds on the outside. The Chinese never offered any objection to the cloud-filled conference rooms. For the French, M. Briand was the principal user of tobacco, and when he was not in a plenary session, where no one is permitted to smoke, he never was seen without his Turkish cigarette.

Niagara's Future City.

An idea which has occurred to many minds since the last "harnessing" of Niagara falls was clearly put by a speaker before the Engineers' society of New York. It is that most of the electric power obtained from the falls will be used within a few miles of its place of origin instead of being transmitted to distant cities. In other words, it is believed that at and near the falls will be situated the future industrial center of America. It would be theoretically possible, it is stated, to transmit power from Niagara as far as San Francisco, but the cost would be prohibitive. It is much cheaper to locate factories near the falls.
