### ALL PREFER MAN AS "BOSS"

Workers of Both Sexes Practically Unanimous—Women Too Fond of Finding Fault, Claim.

During your working hours, would you rather have a man or a woman for a boss? This question has been asked in Chicago, with replies that are unanimous in their tenor. You can probably guess the answer.

A middle-aged advertising man says he prefers to work for a man, because a woman doesn't want to be bossed by a woman, anyhow. Seriously, he says, a man is more likely to be solid, stable and businesslike, while a woman is more prone to be temperamental and to "act the part of the modern woman," whatever that is.

The men are not alone in this view, it appears. A young woman artist says she would rather be bossed by a man, any day. A man, she says, from the depths of her experience, will not find as many faults with your work as a woman will. A woman will scrutinize every angle and try to find something to complain about, while a man will simply let it go for what it's worth—perhaps, though she does not say so, in resigned despair of getting anything better. Moreover, this girl has found out that men will pay more than women.

Then there is the opinion of a student, who has not yet gone to work, but who wants a man boss when she does. Men, she says, haven't the nerve to tell a woman to do more than she is able to do. "A man respects a woman and he'd rather do something for her to save her the trouble. A woman won't do anything like that."

### WATER HAS PECULIAR ACTION

Objects Placed in Irish Lake Undergo Partial Petrification in Comparative Short Time.

What is undoubtedly one of the most curious lakes in the world is to be found in Ireland. This lake has the power of petrifying any substance that may fall into it.

Of course, the petrification is not absolute, but the substance is coated with a layer of stone, which is found dissolved in the lake, and the stone then hardens and forms a shell over the substance.

A well-known English cutlery firm heard of this and sent a man over to inspect it.

He selected several pieces of hard wood, which he sank with weights, and then marked the places with small buttons.

A fortnight later he returned and took up two pieces of the wood, which he found to be partly petrified.

Two weeks after, he drew up the other pieces, and found each piece to be as hard as flint.

The firm then made several experiments with the wood, and found that at a certain stage of petrification an excellent razor hone could be manufactured from it.

### Paper the Greatest Invention.

The expansion of literature and the spread of enlightenment, which put an end to the Dark ages, is ascribed to the invention of movable type by Gutenberg, or somebody else, at the end of the Fourteenth century. But the credit belongs rather to the unknown chemist who invented the process of making paper. The ancient Romans stamped their bricks and lead pipes with type, but printing had to wait more than a thousand years for a supply of paper. Movable type is not the essential feature of printing, for most of the printing done nowadays is not from movable type, but from solid lines or pages. We could, if necessary, do away with type and press altogether and use some photographic method of composition and reproduction, but we could not do without paper. The invention of wood pulp paper has done more for the expansion of literature than did the invention of rag paper 600 years ago.

### Not Work of One Inventor.

Moving pictures were not invented by any one person. They were developed by many men.

Plateau, a blind man of Ghent, in 1838 made a toy which gave illusion of moving figures by showing numerous drawings in rapid succession. It was known as the "phenakistoscope." In 1860 this idea was incorporated in the "zoetrope," also a toy. In 1872 Muybridge used photography instead of drawings. Peynaud of France in 1877 enlarged the scope of the machine by projecting pictures on a screen with a stereopticon arrangement. Ribbon film was first used in 1888. In 1890 cameras were invented that were able to take ten exposures a second. They were known as Friese, Greene and Evans cameras.

The first really successful machine was the "kinescope," invented by Edison in 1893.

### Forty-Five Minutes Under Water.

Many persons do not realize that the whale is just as much mammal as a horse. There is no resemblance to a fish to be noted about a whale. It is an animal which has been driven into the water by its enemies and has gradually accommodated itself to life in the ocean. It must come to the surface at intervals for air, but it is enabled to stay under for a period of 45 minutes without any inconvenience. During that time the air in its lungs has become so heated that when the animal comes to the surface and discharges it the air takes the form of vapor. This is what takes place when the whale is said to "spout."
