QUANTITY OF WILD FLOWERS GREATER THAN EVER BEFORE

Mount View, May 23.—(Special to The Sentinel.)—Due to the general advancement of the season this spring, the wild flowers are growing and blooming in greater profusion than they are ever remembered to have done before. The hills and valleys alike are literally covered with many varieties, together with tall grasses, while all crops are looking splendid. A good cherry crop is anticipated and although

prunes and pears will be a small crop, apples will be a good crop and berries, although the planted acreage in this neighborhood is not large, will probably yield plentifully.

LEE ROY WOODS TO BUILD EUGENE APARTMENT HOUSE

Lee Roy Woods, formerly of this city but now of Eugene, has taken out a permit to erect a two-story double apartment house in that city. The estimated cost of the building is \$3000.

Rebekahs Name Officers.

Mrs. Leita Stewart has been elected noble grand of the Rebekahs for the coming year. Other officers elected are Mrs. Anna Beidler, vice grand; Linn Violette, secretary; Mrs. Eva Hatch, treasurer. The appointive officers will be named later.

A wanted will rent your house.

FREAK EGGS ARE FOUND AT ALLEN CHICKEN RANCH; GARDEN PEAS IN BLOOM

Freak eggs have frequently been found by Mr. and Mrs. G. R. Allen, who came here from Idaho several months ago to run a chicken ranch just north of the city. Recently they found a mammoth egg measuring 7x8 inches and weighing 5 1/2 ounces. At the same time they found three small eggs, perfectly shaped, slightly larger than a robin's egg. All were laid by White Leghorn chickens in the Allen flock.

The Allens also boast of garden peas four feet in height and in bloom. The plants received no more than ordinary cultivation.

Notice to Kids Under Fifteen

There are about a dozen of our ice cream tubs and cans lost around this town and to any one of you who brings one tub and one can to us during chautauqua week we will guarantee to give you all the RED ROSE BRAND ICE CREAM you can eat at one sitting. If the tubs are big and the kids small, you can double, and we'll fill you both.

Cottage Grove Creamery

(Note to Parents—If there IS a capacity limit, mark 'em and we'll fill 'em to that and quit.—C. G. Creamery.)

U. S. TIMBER SUPPLY WILL BE EXHAUSTED IN 70 YEARS

U. of O. Chemistry Professor Predicts Day of Complete Dearth of Commercial Timber.

University of Oregon, Eugene, May 15.—Without allowing for any increase in population the timber supply in the United States will be exhausted in 70 years, according to O. F. Stafford, head of the University of Oregon department of chemistry, who has prepared a paper on "Utilization of Timber." Professor Stafford has made a close study of the timber resources since he began the work that led to the successful development of the Stafford process for wood distillation. There are people now living, says Professor Stafford, who will see a complete dearth of commercial timber in this country unless conditions affecting growth and consumption change radically.

"The original forest area of the United States was something near a billion acres," writes Professor Stafford. "It is now less than half that. We had in early times five trillion board feet of timber; the present residue is perhaps two trillion. By far the larger part of the missing three trillion units has been removed in very recent years. The rate of increment of American forests is estimated as only one-third that in Europe and we are using trees three times as fast as they grow. Our per capita consumption of timber is eight times that of Europeans. We are using twice as much wood per person as we did 50 years ago. Approximately 50 billion board feet of lumber will be cut in the United States this year. In order to obtain the total wood substance drawn from our forests there must be added to the above figures the amounts of wood used for purposes other than lumber manufacture and this brings the grand total up to the incomprehensible sum of 300 billion board feet.

"The annual forest harvest of the United States would suffice for the construction of a solid timber roadway a foot thick and 200 feet wide entirely around the earth at the equator. Of all the products of life action that good Mother Nature brings forth in this world of ours wood substance is the most lavishly supplied; yet our needs are rapidly forging ahead of this supply.

"About one-half of the present standing timber in the United States is in the Pacific northwest. Heading the list of available species is our own splendid Douglas fir. Southern pine is second in the list, although very nearly equaled in quantity by western yellow pine. It is obvious from these statements that this section of the country must play a very important part in the future of a key industry which inevitably advance rapidly to proportions of colossal magnitude. The next 50 years of history in the lumber industry will see the cashing in of resources which have been accumulating in Oregon for a period reaching far back beyond its settlement and possession by white men."

FARM POINTERS

(From Oregon Agricultural College.)
If your clover or alfalfa fails to catch, examine the roots of the plant for nodules. The failure may be due to lack of inoculation. The inoculation with cultures will not take the place of lime in sour soils. Bacterial cultures for inoculating the legumes may be had at low cost from the department of bacteriology, Oregon Agricultural college, Corvallis.

The currant aphid which causes the very striking blotches of red coloring on foliage, with cupping and crumbling of the leaves, can best be controlled with a nicotine dust. Obtain a 4 per cent nicotine dust from your spray dealer and apply a light coating through a cheese cloth bag or sack. Best results will be obtained when there is no wind and temperature is high.

The elm leaf beetle, an imported leaf-eating pest which attacks elm trees as a grown beetle and later as a grub, is now appearing on the elm trees of city streets and parks. The adults should be killed before they lay eggs. Spray with arsenate of lead, 3 pounds to 100 gallons of water.

Gooseberry mildew and anthracnose leaf can be controlled by lime-sulphur spray, using one gallon of the concentrated liquid or four pounds of the dry to 40 gallons of water.

The recommended control measures for cylindrical leaf spot that appeared on cherry and prune trees last year is an application of Bordeaux 4-4-50. The old last year's leaves carry the disease and should be buried.

ANOTHER CEMETERY NEGLECTED.

Cottage Grove, Ore., May 23.—(To the Editor.)—We have tried to get the people to come to the Sears cemetery to clean it up so people wouldn't be ashamed to come out and decorate the graves, but they have not turned out very well, so we have set Sunday, May 27, to give everybody a chance to come and work on the grounds.

We want them to come for the day, not to decorate the graves, but to clean up the grounds so people won't be ashamed to come out and decorate. We don't want any excuses about getting ready to work on the road or anything like that, or gardens, but come with a smile and a good, sharp garden hoe.
J. S. BURNETTE.

Three thousand people read The Sentinel each week. What have you to tell this vast throng? xxx

\$18 Puts a Westinghouse Automatic Range Into Your Home

The modern way to cook—and it is, as usual, the sensible way—is with a Westinghouse Automatic Electric Range. You can put your dinner on to cook, set your regulators and go about your other work without any further worry about the food in the oven. Set your regulators and that is all there is to it. The automatic control maintains the temperature. The charts tell you how long to leave any particular kind of food in the oven and the point at which to set the automatic control.

Miss Grace Bogue

of the Westinghouse Electric Company

will conduct a

FREE COOKING SCHOOL

at 10 o'clock a. m. every morning of next week at the high school domestic science department, beginning Tuesday forenoon and continuing to Saturday forenoon. During the hours that she is not at the high school Miss Bogue will be at our office, where she will give free demonstrations in the operation of the Westinghouse Automatic Electric Range.
