

The Easy Way to Own a Ford

Ford

ONE-TON TRUCKS

Here is a chance for you to get started toward greater profits—or to build up a business of your own—and it costs only \$5 to make the start.

Everywhere, Ford One-ton Trucks and Light Delivery Cars are saving more than this every year for their users. So, as soon as your truck starts running it will quickly take care of the purchase price and add new profits as well.

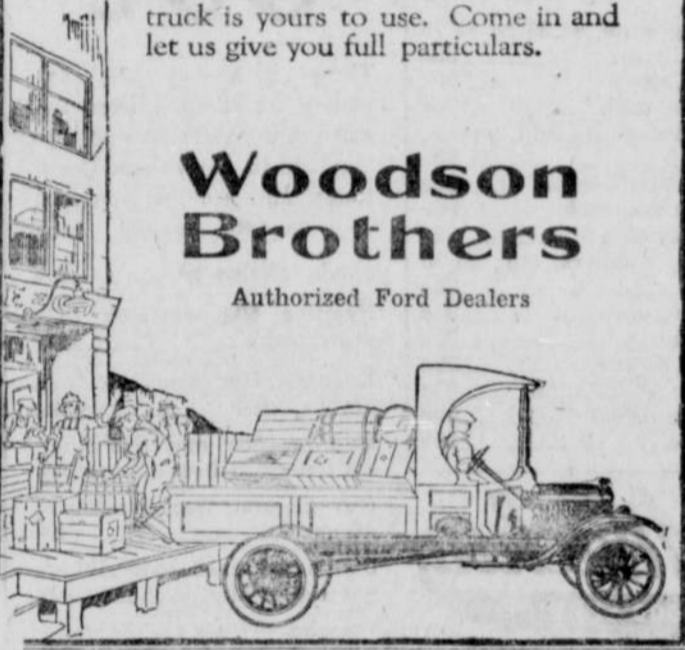

It will widen the area in which you can do business, enlarge the number of customers you can serve—and keep your delivery costs down to the lowest point.

Start now toward the ownership of a Ford Truck or Light Delivery Car—use the

Ford Weekly Purchase Plan

\$5 Enrolls You

Under the terms of this Plan, we deposit this money in a local bank at interest. Each week you add a little more—this also draws interest. And in a short time the truck is yours to use. Come in and let us give you full particulars.

EAGLE MIKADO

The YELLOW PENCIL with the RED BAND

EAGLE PENCIL CO. NEW YORK, U.S.A.

Shothole borers attack only trees that have been set back by some injury enough to form a sour sap condition. On boring into such a tree the insects prepare to feed their young grubs by planting in the tunnel a fungus that will grow only in sour sap conditions. The beetles are attracted to trees in this condition and attack them. So the first step in control is to find the cause of poor vitality in the tree and to remove it as much as possible. Seriously infested trees should be cut down and burned.

The multivane fan for recirculating the air in the new type of drier developed at the Oregon experiment station is the most economical and efficient. It is small and compact, economical in horsepower and delivers a larger volume of air than any other fan of equal size.

CHICAGO'S MAIL TERMINAL BUILDING

To speed up the handling, distribution, and dispatch of all paper, catalog, and parcel-post mail originating in Chicago or passing through Chicago destined to Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Missouri, Ohio, South Dakota, Tennessee, and Wisconsin, there has been recently placed in service in Chicago a monster mail terminal building which is without a parallel—anywhere.

This building is of brick and steel, approximately 800 feet long, 75 feet wide, and six stories and basement tall. On one side are tracks which have a capacity for 61 railway mail cars—one track running the full length of the building inside. On the other side is a 30-foot driveway bordering on which is unloading space sufficient to accommodate 60 mail wagons at one time.

The entire first floor is given over to the receipt, dispatch, and storage of mail; another floor is devoted to the distribution of parcel-post mail; another floor is used for the handling of paper mail, and so on. One floor is necessarily an operating or service floor—for the proper maintenance of the plant, and contains the office of the superintendent and his force, machine shop, carpenter shop, stock room, cafeteria, first-aid, study, and rest rooms.

About 970 persons are employed in the work of handling mail matter, while about 80 additional employees and 25 clerks and officials are required to look after and operate the building and its machinery.

Four stairways, three passenger and fourteen freight elevators facilitate movement between floors. The mail-handling equipment includes about 1,800 trucks of various kinds and sizes, several hundred sorting tables, sack racks without end, and a small fleet of electric tractors. Most of the work of distribution is done by means of some eight miles of mechanical belt conveyors which function with an amazing rapidity and an uncanny sureness. These conveyors, some of which are 44 inches wide and 650 feet long, carry mail between divisions, between floors, and dump it on distributing tables from which they also carry it to chutes which drop it to dispatching platforms.

This terminal ultimately will handle an average of 26,000 sacks of parcel post and 18,000 sacks of paper mail every 24 hours—or 1,833 sacks per hour. According to an official of the railway mail service, through this one building will pass more mail than originates in the entire Dominion of Canada.

Production of Certified Potato Seed Increasing

(Prepared by the United States Department of Agriculture.)

Production of certified potato seed has made rapid strides in the last four years, according to the United States Department of Agriculture. In 1919 there were in the United States but 3,750 acres of potatoes that met the requirements set for the production of certified seed. In 1922 the acreage reached 17,258, and the production of certified seed was 2,273,900 bushels. In 1919, 43 per cent of the acreage inspected and offered for certified seed was accepted and passed; in 1920, 52.75 per cent; in 1921, 59.5 per cent; while in 1922, due to higher standards called for by the regulations, but 40 per cent of the acreage offered was accepted as good enough for certification.

Canadian potato growers have also been making increased effort to produce more certified seed, producing 309,065 bushels in 1922, as compared to 234,551 bushels in 1920.

The grading of certified seed potatoes is being given much attention in a number of the states and Canada where grading inspection is required, and requirements are equally strict in all localities. Certified seed must live up to its name both in looks and in results. It must be free from varietal mixtures, true to type, and comparatively free from blemishes and mechanical injuries. The growers of certified seed, the inspection agencies, and the organizations conducting the marketing of the product are all equally concerned and share a mutual responsibility.

Soy Beans to Replace Alfalfa in Lamb Feed

The use of soy beans to replace alfalfa in lamb feeding was given a trial during the past winter at the Illinois station. Results obtained from a ration of corn and soy bean hay were practically as good as from the standard ration of corn and alfalfa hay. When whole or ground soy beans with soy bean straw were fed in place of the hay, the results were less satisfactory, the gains being lower and the feed consumption higher.

The two lots fed alfalfa hay and soy bean hay gained at the rate of a third of a pound per head per day. On the basis of feed requirements for 100 pounds of gain, the alfalfa-fed lambs ate six pounds less corn but six pounds more hay than those fed soy bean hay. This showing would indicate that soy bean hay of good quality makes a very acceptable substitute for alfalfa.

Hog Is Most Efficient in Making Use of By-Products

With few exceptions, says the United States Department of Agriculture, there is feed enough wasted on every farm in the country to make the pork and pork products consumed on that farm. The hog is most efficient in making use of the farm by-products. With the hen the hog will select and utilize the wholesome parts of unsound and unmarketable grains, refuse from truck crops, and by-products from the dairy. This is one reason why hogs are used on such a large proportion of our farms. But the hog's principal article of diet is corn, and the secretary of agriculture has remarked that "our hog crop serves as a slow absorber for the variation in production of our corn crop year by year, thus ironing out the irregularities in corn prices."

Timeliness in Spraying to Combat Many Diseases

In spraying to combat fungus diseases, we cannot emphasize too highly the importance of timeliness in making the application. The upper and lower surfaces of the leaves must be left well covered with the fungicide if we expect to avoid trouble. Too many growers do not fully realize the necessity of spraying before the enemy appears. After the plants are thoroughly infected, nothing can be done.

Several Advantages of Sweet Clover for Stock

The soy bean can be grown successfully with corn and is becoming a very popular crop in the corn belt, as it can be hogged down and helps to balance the ration of corn. It can be grown on a wide range of soils, but inoculation is necessary when it is grown for the first time. The hay from this crop contains a high percentage of protein and is palatable. This plant adds a great deal to the value of silage when it is grown with silage corn.

Select Tillable Land When Pasture Needed

Those who are in need of more pasture may select some of their tillable land and put in pasture at least for a few years till the land is improved and the increase in animals or animal products will pay for the reduction of crops as a result of fewer acres of tilled land and more pasture, perhaps a handsome profit in addition.

Mysterious Disease of Yellow Soy Bean Plant

A mysterious disease of yellow varieties of soy beans which causes mottling of the seed is believed to be caused by something in the soil or in the way the crop is tilled rather than something inherent in the seed, according to a news bulletin from Ohio State university.

NOTICE FOR PUBLICATION.

Department of the Interior, U. S. Land Office at Roseburg, Oregon, June 19, 1923.

Notice is hereby given that Wilson B. Stinnett, of Cottage Grove, Oregon, who on June 6, 1921, made homestead entry serial No. 013227 for E^{1/2} NE^{1/4}, SW^{1/4} NE^{1/4} and NE^{1/4} SE^{1/4}, section 17, township 21 south, range 2 west, Willamette meridian, has filed notice of intention to make final three-year proof, to establish claim to the land above described, before Register and Receiver of the United States Land Office at Roseburg, Oregon, on the 26th day of July, 1923.

"THE LITTLE CHURCH AROUND THE CORNER"

So fittingly descriptive and yet at the same time so unusually appropriate is the legend "The Little Church Around the Corner" that its long-continued usage in referring to this quaint and honored landmark in "Little Old New York" has all but blotted the real name of this house of worship from the memory of the hordes of pilgrim visitors who, annually or more or less often, journey thither to "pay their respects."

"The Little Church Around the Corner," squatly, broad-spread and set well back from the narrow and busy thoroughfare, is none other than the Church of the Transfiguration. Its exact location is No. 5 East 20th street, just around the corner from Fifth avenue.

The story of how this unusual name came into being, and which arose in a perfectly natural manner, is indeed interesting. It also serves to illustrate how, through a mere turn of fate, fame sometimes unexpectedly attaches itself to an object—in this case a religious edifice.

A noted actor had died. He had no church connection. As he was widely known, his family and friends felt that a public funeral was a necessity. The curator of a neighboring house of worship was requested to conduct the funeral service. He promptly declined, adding that "perhaps the rector of the little church around the corner might be willing to serve." History records the fact that the funeral was held at "The Little Church Around the Corner."

Following in the wake of this incident, The Church of the Transfiguration was adopted as the Protestant house of worship by the theatrical profession. Since that time, this little church has been the scene of countless christenings, weddings and funerals. The church and its present and past pastors have so endeared themselves to all who have come into direct contact with them that, recently, when the present rector celebrated his silver jubilee, letters, telegrams and gifts from all sections of the country, especially from actors and newspaper men, flowed in to express the "Many happy returns of the day" spirit in the hearts of the senders.
