THE FIELD MUSEUM

The exhibits at the World's Fair, Chicago, in 1893, offered an exceptional opportunity for the founding of a museum as an everlasting memorial of this great international affair and to preserve its endless antiquities. To start and further this movement, Marshall Field, Chicago's merchant prince, donated \$1,000,000, and the exhibits desired were selected and placed on display in the Art palace on the exposition grounds.

When Mr. Field died in 1906 he left \$4,000,000 additional for a building to be erected on a permanent site, and another \$4,000,000 to provide for its maintenance. The great, imposing, spacious-halled palace of white Georgia marble—covering eleven acres of ground, said to be the largest marble building in the world, which now stands in Grant park on the lake front in Chicago, the Field Museum of Natural History, is the result.

Inside, the world, it might be said, awaits your inspection. One room holds the exhibits which show the advances made by men of ancient times that led up to the present civilization; another displays Egyptian antiquities without end; a third, bronze and ancient glassware from Rome. Another section contains displays representing the early races of North and South America and the Pacific Islands. A highly instructive exhibit is that which shows various birds, animals, fish and reptiles artistically grouped in their natural habitats. One hall is packed with exhibits from China. The habit of growth and structural makeup of many flowers and seeds is shown in an extremely interesting fashion. The display of woods from various parts of the world and the products made from wood is extensive. Numerous examples of meteorites and crystals, and models showing the workings of mines of many kinds, are shown. Ethnological and geological collections from Africa, India, Japan and other far-away lands contain many curious objects.

The entire world was searched and everything which the authorities considered as worthy appears to have been brought to this central headquarters for the public to view and study. The carcass of a monstrous herbivorous dinosaur which roamed the earth centuries ago is perhaps the oldest inhabitant; the skeleton of a monster whale is perhaps the largest single exhibit; the smallest probably is the miniature seed of some we plant; an Indian medicine wheel, found on a mountain top, surrounded with an air of ceremony, perhaps of sacrifice, too, its use conjectural, certainly is a most peculiar exhibit.

At any rate, the generosity and foresight of a wealthy public-spirited man has made it possible for future generations to "see the world" in his home town—Chicago.

THE AMERICAN SPHINX

Set high above the shimmering waters of the picturesque Rock river on the shoulder of a huge bluff near Oregon, Illinois, ninety-nine miles (by rail) from Chicago, and looking out over a country that is indeed good to look upon, is the colossal statue of the Indian Chief, Blackhawk—the largest concrete monument in America, if not in all the world—the American Sphinx.

This statue is the endearing tribute of the sculptor, Lorado Taft, to the American Indian. It depicts the famous chief standing erect, with folded arms, garbed in a long, flowing robe or blanket, which folds gracefully about the figure, gazing silently and in farewell attitude o'er the fertile valley which the members of his tribe were wont to roam.

The attention-inviting location and pleasing proportions of this mute figure lend to its bigness a nobleness of poise that is in complete accord with the courage displayed in the countenance of this splendid warrior.

This American sphinx rises from a huge concrete pedestal which rests upon the solid rock of the river bluff and weighs something like 300 tons. In its construction approximately 400 barrels of cement and 4,000 pounds of twisted reinforcing steel rods were used.

The subject was so unique and the construction so unusual that peculiar methods were of necessity called into play. These methods and their applications excited extraordinary attention.

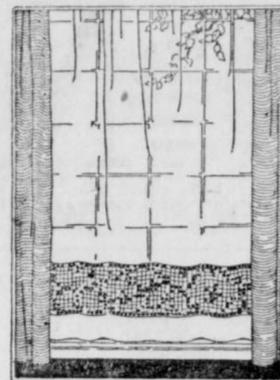

In order to insure the preservation of correct proportions a working model six feet in height was made. This model was then enlarged seven times. Then a mold was built over it. Afterward the model inside of the mold was dismantled and removed. Then the mold was filled with concrete. Pink granite dust or screenings was mixed with the concrete. This process gave to the finished figure a granite-like appearance. This mass was next allowed to set. After the setting process had terminated, the mold was razed and carried away and lo there emerged and stood in all its glory an everlasting memorial to the passing of the Red Man—the American Sphinx.

City Council

Special meeting May 19.
Remonstrance presented against the paving of First alley south between Seventh and Southern Pacific property. Remonstrance sustained.
Mayor advised to dispense with services of Traffic Officer Cornell.
Recorder directed to invite A. A. Rafferty, head of the state traffic department, to meet with the city council for the purpose of giving advice as to best methods of regulating motor traffic.

City police officials instructed to have bicycle riders comply with traffic regulations.
Viewers reported upon damage to property of Mrs. Sarah L. Harms by the proposed widening of Tenth street, setting the damage as \$75 greater than the benefits. Recorder was instructed to make a tender of the money.

B. H. Townsend, of Eugene, was employed to make a preliminary estimate of the cost of three proposed sewer projects.

Water committee given power to give the forest service location for dam on Prayther creek and to proceed with whatever work is necessary to provide the city with a sufficient supply of water.

Water Commissioner Pitcher reported that repairs to pipe line had greatly increased amount of water coming to the city and that the tying in of Prayther creek would double the amount.

Fire Chief Mackin given authority to have the city fire hydrants painted.

Ordinance enacted amending peddler's ordinance and fixing schedule of license fees.

Building permits issued as follows: To Mala Miller for reshingling dwelling at 1659 Madison; Jenn E. Long for reshingling of dwelling on east Adams avenue; E. A. Wilson for new roof on building on Main street.

An investigation by Walter P. Taylor, biologist of the department of agriculture, and Harold C. Bryant, game expert of the California fish and game commission, with respect to the possibility of birds and wild animals being carriers of the hoof and mouth disease germ discloses the fact that it has been so far impossible to check any specific instances where wild birds or wild animals have been carriers, according to information from the Oregon game and fish commission.

It is pointed out that blackbirds, because of their habit of feeding in the vicinity of domestic stock, and turkey buzzards, which might feed on the carcasses of stock which have died from the disease, are the most likely to be carriers of the germ, although it has been impossible to determine this to be a fact.

It is considered impossible for migratory birds, and particularly waterfowl, to carry the germ, although certain species of waterfowl, such as wild geese, brant and cranes, feed extensively in the infected areas of southern California. These birds spend a large portion of their time in the water and this, in addition to the fact that fresh air and sunshine are vital enemies of the disease germ, makes it practically impossible for these birds to become spreaders of the disease, it is stated.

The best tempered men are not usually those with iron wills. They say, "A fool for luck." Anyway only a fool waits for luck.

Say it with printers' ink. The wanted is like a ship sent out into an unknown sea, and it brings back its cargo to its sender.

Seven Reasons Why Lubricating Gasoline

- [1] By the scientific lubrication of the upper cylinder walls and combustion chamber, Lubricating Gasoline eliminates the heat and steady drag on the motor caused by friction.
- [2] By the lubrication of the upper cylinder walls and combustion chamber, it prevents the deposit of carbon, which will not adhere to any oily surface.
- [3] By the use of Lubricating Gasoline, the carbon is removed from the cylinders, eliminating the sticking, burning and pitting of valves, excessive wear on pistons and scored cylinders.
- [4] Lubricating Gasoline is THE ONLY system which provides lubrication for the upper cylinder walls of a gasoline engine without producing carbon, foul spark plugs, pitted valves and faulty ignition.
- [5] 20% TO 25% MORE MILEAGE AND POWER
By the lubricating of machinery we reduce friction; by the reduction of friction we reduce the amount of power necessary to propel machinery; by reducing the amount of power necessary to propel machinery we can reduce the amount of fuel necessary to produce sufficient power, hence more mileage and power.
- [6] It is proven by actual tests that WATER WILL NOT BOIL IN THE RADIATOR if you use Lubricating Gasoline.
- [7] The originators of Lubricating Gasoline guarantee that you can make as many miles on 160 gallons of LUBRICATING GASOLINE as you would make on 200 gallons of regular gasoline.

HALF A PENNY FOR A PAGE AD

The cost to any regular advertiser to present a page ad to the 5000 readers of The Sentinel is one-half of a penny for each reader so reached. Two full page ads can be presented for the cost of postage alone upon a printed circular sent to 5000 persons.

Reaching 5000 persons with a page advertisement at a cost of half a penny each is extremely moderate in cost.

The ordinary business man does not, however, regularly use page ads. A half page ad will reach the same number of readers at a cost of a quarter of a cent each.

A quarter page ad can be run a month at a cost of approximately half a penny for each reader reached with the four ads.

A ten-inch ad, which is somewhere near the average used by a large number of advertisers, costs four one-hundredths of a penny for each reader reached.
