

**MAN OF 74 MADE YOUNG IN 3 WEEKS BY SIMPLE METHOD**

**Former Kansas Contractor Tells of Wonderful Results From Testing Korex Compound.**

Thomas J. Glaseock, 74, well-known old-time Kansas contractor, declares he has virtually been made young again by the recently discovered korex compound, which by many users is pronounced superior to "gland treatments" as an invigorator and revitalizer.

"I feel like I did at 35," says Mr. Glaseock, "and seem to be getting stronger every day. During my three weeks' use of the new discovery, pains and weaknesses of many years standing disappeared almost magically. Today I am as vigorous and supple as I was in the prime of life. Furthermore, when I began using the compound, my memory was virtually gone and I was almost blind. Now my mind is clear and active and I can read the finest print without difficulty."

In order to find out whether the results were lasting, Mr. Glaseock waited six months before reporting on his test of the discovery. On this point he says:

"Every passing day strengthens my conviction that my restoration is not only complete but permanent. I can't express the happiness this great discovery has brought to me. It has made me 'young' again."

Similar reports are being made almost daily. For instance D. W. Wood, of New Orleans, past 60 years of age, says: "The compound has brought me back to as good healthy physical condition as I enjoyed at 35. I am apparently as supple as at 25 and my eyesight is better than for years. I would not take \$5000 for what the discovery has done for me."

The compound referred to by Mr. Glaseock and Mr. Wood is put up in tablets for easy use at home by

Thomas J. Glaseock

anyone. It has won the praise of thousands who have suffered from nervous exhaustion, diminished or depleted vigor, neurasthenia, premature age and lack of animation and vital force. Elderly people have pronounced it a "fountain of youth."

Prepared especially for acting directly on lower spinal nerve centers and blood vessels gratifying benefits are known usually in a few days, according to thousands who have used it. Enthusiastic reports from users acclaim the compound as giving speedy satisfaction in obstinate cases that have defied all other treatments previously used.

Realizing that thousands of enfeebled, half-alive folks may consider such news "too good to be true," the American distributors of korex compound have arranged for korex compound to be placed on sale in Cottage Grove at Kom's for Drugs. Just ask for korex.

**Timely Suggestions for Keeper of Bees**

**Plenty of Stores for Brood Rearing Important.**

(Prepared by the United States Department of Agriculture.)

The object of all manipulations of bees during the spring should be the securing of the largest possible force of workers at the beginning of the main honey flow.

The most important thing is plenty of stores for brood rearing, because it takes a frame of honey to raise a frame of brood. Consequently, every colony should have at least forty-five pounds of honey in the hive. This should be given in the form of sugar sirup made by boiling together two pounds of water to one part of sugar. If frames of honey have been saved from the year before, they make the best feed.

All weak, queenless colonies should be united with strong colonies. Do not unite two weak colonies at this time of the year. To unite, place the weak colony on the strong with a newspaper between. Punch a few small holes in the paper and they will unite with the loss of no bees.

Remember to give your queen plenty of room for brood rearing. Many good queens become honey bound. Avoid this by putting on an extra hive body as soon as live frames have some brood in them.—Newton Boggs, Deputy Bee Inspector, Colorado Agricultural College.

**Amount of Manure to Be Applied for Corn Varies**

The amount of barnyard manure to be applied for effective and economical results with a crop of corn varies considerably, depending not only on the crop but on the soil, the condition of the manure, and several other factors. Five tons to the acre is a very light dressing, twelve to fifteen tons a medium dressing, and twenty to twenty-five tons a very heavy dressing for an ordinary soil. Experiments have shown that under average corn-belt conditions corn in a rotation including a legume requires more stable manure than it is usually practical to apply if the fertility of the soil is to be maintained. The application of a phosphatic fertilizer in connection with the manure is necessary. The application of a commercial fertilizer containing potash is also usually advisable. The rotation can usually be so arranged as to provide nitrogen through the use of suitable legumes.

**Eggs of High Fertility From Mature Fowls Only**

Eggs of high fertility and hatchability are obtained only from healthy, vigorous, mature breeding stock. Where young stock is to be used, only cockerels and pullets that have reached maturity and were hatched before June 1, should be selected for the breeding pens. When available, old birds are always preferred for the production of hatching eggs. Birds that have recovered from serious disease of any kind should not be used in the breeding pens. The vigor of males and females influences the fertility and hatchability more than anything else. If the weather is cool, gather the eggs four or five times daily and place them in the cellar or basement where the temperature ranges from 40 to 65 degrees. Save only the medium-sized clean eggs, free from wrinkles or cracks. Only about 70 eggs from every 100 gathered will qualify to a reasonable standard for hatching purposes.

**Importance of Radio in Producing and Marketing**

The importance of radio in the production and marketing of agricultural products is brought out in a special survey of about 1,200 representative farmers, just completed by the United States Department of Agriculture. More than 50 per cent of the 1,200 farmers replying reported that they owned tube sets employing three or more tubes, while approximately 50 per cent of the farmers reported having homemade sets ranging from simple crystal detectors to tube sets.

**Proper Litter for Chicks**

Any dry, clean, absorbent material, free from mustiness, such as the chaff from the haymow, makes good litter for baby chicks. Damp or moldy material of any kind should be avoided. Finely cracked corn, pinhead oatmeal or rolled oats and cracked wheat make the best hard grains for baby chicks. A mixture of wheat bran, two parts, and wheat middlings, cornmeal, sifted ground oats and sifted meat scrap, of each one part, is a good dry mash of ground grains.

**Hubam Is Getting Cheap**

Hubam, which is the annual sweet clover, is now getting cheap enough in price so that many people are considering using it instead of the regular biennial sweet clover. Hubam has the advantage that it is an annual and there is no danger of it coming up the following year in the corn.

**Celeriac Same as Celery**

Celeriac roots are planted and grown in almost the same manner as celery. The seed is sown the first of May, and the plants are transplanted about the 10th of July, 8 to 10 inches apart, in rows three feet apart. It does not have to be banked or boarded up like celery.

**Growers Like Oiled Wrapper for Apples**

**Use Is Suggested as Result of Thorough Trials.**

(Prepared by the United States Department of Agriculture.)

The use of oiled-paper wrappers for preventing apple scald is finding increased favor among growers, particularly in the Northwest, says the United States Department of Agriculture. Approximately 15,000,000 boxes of apples were wrapped for storage last fall, whereas in 1922 there were about 600,000 boxes so treated. The practice of using oiled paper for wrappers is suggested by the department as a result of a number of years of trials with various methods for preventing the appearance of the disease in storage apples and apples in transit, which annually causes great loss to dealers, buyers and shippers, and ultimate disappointment to consumers.

Where in the past it has been customary to wrap the apples in ordinary paper, as is done with the western crop, the use of oiled paper does not entail any additional effort or trouble and adds but two cents to the cost of each box. Apples wrapped in oiled paper of the proper kind come through the winter in excellent condition and have been received with special favor on the market, especially during the latter part of the season. In May, 1923, oiled wrapper apples were selling on the New York auction for \$1 more per box than similar apples in unoled wrappers. Eastern producers who barrel their apples have not made any great use of the new practice because of the impracticability of wrapping apples for barreling. This discovery and practice make it possible to ship apples long distances after storage as well as before storage with little or no loss from scald, and enables growers and dealers to obtain a wider distribution of their product and to safely withhold part of it from the market till the peak of the apple season is past. It reduces the perishability of the crop and makes for a more orderly distribution of the supply and a better market.

**Unique Slogan of Bank of Petersburg, N. Dak.**

"We bank on the cow, the sow, the ewe, and the hen."

The First National Bank of Petersburg, N. Dak., has this slogan on its unique bank statement recently issued. Pictures of cows, sheep, and swine rather than moneybags are the decorations used. On the same page with a statement of the bank's financial condition is one of the agricultural status of the community.

The report points with pride to the improved live stock and diversified nature of the farming in the district: The 6,000 breeding ewes with pure bred rams at the head of every flock, the 60 pure bred bulls, the 100 or more registered cows besides a great number of high-grade females, the large acreage of Grimm alfalfa, the \$51,000 worth of produce shipped out during the past year, and the activities of the Petersburg Live Stock Shipping association, which handled 30 cars of live stock last year.

The officials of the bank have been active in co-operating with the United States Department of Agriculture in encouraging the use of pure bred sties and in general live stock improvement.

**Sweet Clover Requires Well-Settled Seed Bed**

Sweet clover requires a well-settled and firm seed bed, with just enough loose soil on the surface to permit the seed to be well covered. When sown in the spring on winter grain, the seed bed is as a rule in good condition, and the seed will be covered by alternate freezing and thawing. When sown with spring grain, the seed bed is often not so firm as it should be for rapid germination. In such cases it is a good plan to roll the ground after seeding. When seeded without a nurse crop it should never be sown on land which has had no chance to settle. For this reason the land should be plowed some time before seeding and worked down by thorough cultivation. In the West, where spring seeding is always necessary, the best results are secured from fall-plowed land followed by early spring seeding.

**Serviceable Floor for New House for Poultry**

Here's a way to make a dry and serviceable floor for that new poultry house. Use four inches of good grade cinders covered with two layers of tar paper and three inches of cement on top. The cinders should not give any trouble from disintegration or allow the floor to sag or break, for they are often used in a similar way.

A thoroughly dry floor for the poultry is essential to success, according to the department of agricultural engineering at Iowa State college, which offers this suggestion.

**Applying Raw Phosphate**

Raw phosphate should be applied in time to be plowed under; and it is a good plan to disc the ground before plowing, so as to get the phosphate mixed well with the earth. Phosphorus does not become dissolved and move about in the soil water like nitrogen, and hence it is important that the phosphate be distributed throughout the soil as much as possible, to give the roots of plants the greatest opportunity to come into contact with it.

**"Good Values" and "New Things"**

Are Most Attractive at **Umphrey & Mackin's**  
Come to Store and Buy for Your Needs of These

MANY PRETTY EFFECTS IN THIS NEW NECKWEAR

Collar and cuff sets are more popular than ever this season for adding the right touch of smartness to dresses, suits and sport sweaters. We are showing a most attractive assortment of plain and fancy styles using tucks, ruffles and lace edging generously. Prices range.....49c to \$1.25

A SPLENDID VALUE—BURSON "SECONDS" WOMEN'S PURE SILK STOCKINGS—85c A PAIR

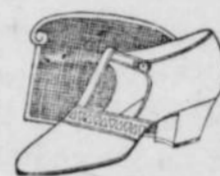

We want you to see them for yourself at the store. Come today: You may want several pairs. Seven colors, including black and white.

**NEW DAINY CURTAIN FABRICS BY THE YARD**

Fine thread curtain serims with ruffling sewed at edge ready to use and by the yard as much as you need. Priced a yard.....60c  
New dainty dotted net and fine marquisette in cream and ceru. You will like these to use with or without colored side drapes. Priced a yard.....60c

**JUST RECEIVED—A POPULAR NEW GRAY SUEDE PUMP AT \$5.00**

This pump is equal in value to many pumps sold at a higher price this season. Gray suede is popular just now because gray will harmonize with every color in dress and hosiery. Try a pair on today.

A Good Value in Heavy Weight Pongee  
Pure silk floss pongee, yard wide, priced a yard.....98c

**BATHING COSTUMES AND ACCESSORIES**

See the bathing suits and their complements, if only to know what is to be had. The new suits are in many attractive colors and the weaves and new models are designed for real action in the water.

Good suits priced \$1.95 to \$6.95  
Rubber caps and scarfs priced at.....25c to 85c

New Color Range in Japanese Crepe  
Including black, white, rose, orange, yellow, pink, open blue, green, tan, brown, etc., priced a yard.....23c

**Share Financially In Community Growth**

AMERICA and its states and cities go steadily forward. Despite every alarming thing that happens there are always found more people, more wealth, more prosperity, whenever Uncle Sam collects the facts. And it is really difficult to imagine how this growth can stop for many generations to come.

WHOEVER has a financial stake in community growth owns an investment as strong as the proverbial Rock of Gibraltar.

WE ALL KNOW that this industry or that industry may have its ups and downs; particular districts and values have their vogues and their declines; new inventions, whims and styles mow down many a profitable institution—but through all these changes our cities and states endure and grow.

It is possible to make an investment which shares automatically in community growth, and does so rightfully because it helps to bring about such growth and to maintain it.

Such an investment is found in the
