SOCIETY

In honor of Miss Margaret Galloway, who left Sunday for Salem, where she is to be employed in an insurance office for a month, a group of her friends held a farewell party last Thursday evening at the Galloway home. Vocal numbers by Leonard Fairry, one of the guests, were enjoyed. Dancing also proved an enjoyable diversion. Refreshments of ice cream and cake, which were brought by the guests, were served. Those in the group were Misses Ruth and Nellie Stewart, Miss Bethel Gowdy, Miss Ruth Phelps, Miss Marian White, Mrs. Mateel Whitlock, Miss Hazel Swanson, Dale Wyatt, Leonard Fairry, Charles Burkholder Jr., Van Beatty, Cecil Caldwell and Ren Sanford.

Darby, and who left Saturday for Longview, Wash., to attend the summer encampment of Hill military academy, Portland, was completely but happily surprised Friday evening when he came home and found the house filled with twelve of his little playmates, who had been invited in to help him enjoy his last evening here. Games and play on the large porch made the evening pass speedily for the small guests. The rooms and porch were made most attractive with Chinese decorations. Ice cream and cake were served, each guest receiving a horn as a favor.

Miss Ruth Stewart gave a piano solo. Mrs. Ernest Wyatt gave a vocal solo. Misses Ruth and Nellie Stewart gave a ukulele number. Leonard Fairry gave two vocal numbers. All were heartily enjoyed. Fragrant sweet-pens mingled with the happy childish faces of the guests made the house look like a flower garden.

A delicious two-course luncheon was served at the close of the card session. Among the hidden guests those present were Mr. and Mrs. H. A. Miller, Mr. and Mrs. George Knowles, Mr. and Mrs. D. O. Byrne and Miss Donna Nichols.

Both Wrong.

Two travelers were seated in a train going to Chicago. As the train drew up in a station one of the travelers opened the window and, drawing a deep draught of fresh air, turned to his companion and exclaimed:

"Isn't this salubrious?"

"It's exhilarating," said the other.

"Beg pardon," chimed in the conductor, "you're both wrong; it's Kalamazoo."

Growers Like Oiled Wrapper for Apples

Use Is Suggested as Result of Thorough Trials.

(Prepared by the United States Department of Agriculture.)

The use of oiled-paper wrappers for preventing apple scald is finding increased favor among growers, particularly in the Northwest, says the United States Department of Agriculture. Approximately 15,000,000 boxes of apples were wrapped for storage last fall, whereas in 1922 there were about 600,000 boxes so treated. The practice of using oiled paper for wrappers is suggested by the department as a result of a number of years of trials with various methods for preventing the appearance of the disease in storage apples and apples in transit, which annually causes great loss to dealers, buyers and shippers, and ultimate disappointment to consumers.

Where in the past it has been customary to wrap the apples in ordinary paper, as is done with the western crop, the use of oiled paper does not entail any additional effort or trouble and adds but two cents to the cost of each box. Apples wrapped in oiled paper of the proper kind come through the winter in excellent condition and have been received with special favor on the market, especially during the latter part of the season. In May, 1923, oiled wrapper apples were selling on the New York auction for \$1 more per box than similar apples in unoled wrappers. Eastern producers who barrel their apples have not made any great use of the new practice because of the impracticability of wrapping apples for barreling. This discovery and practice make it possible to ship apples long distances after storage as well as before storage with little or no loss from scald, and enables growers and dealers to obtain a wider distribution of their product and to safely withhold part of it from the market till the peak of the apple season is past. It reduces the perishability of the crop and makes for a more orderly distribution of the supply and a better market.

Unique Slogan of Bank of Petersburg, N. Dak.

"We bank on the cow, the sow, the ewe, and the hen."

The First National Bank of Petersburg, N. Dak., has this slogan on its unique bank statement recently issued.

Pictures of cows, sheep, and swine rather than moneybags are the decorations used. On the same page with a statement of the bank's financial condition is one of the agricultural status of the community.

The report points with pride to the improved live stock and diversified nature of the farming in the district: The 6,000 breeding ewes with pure bred rams at the head of every flock, the 60 pure bred bulls, the 100 or more registered cows besides a great number of high-grade females, the large acreage of Grimm alfalfa, the \$51,000 worth of produce shipped out during the past year, and the activities of the Petersburg Live Stock Shipping association, which handled 30 cars of live stock last year.

The officials of the bank have been active in co-operating with the United States Department of Agriculture in encouraging the use of pure bred sires and in general live stock improvement.

Sweet Clover Requires Well-Settled Seed Bed

Sweet clover requires a well-settled and firm seed bed, with just enough loose soil on the surface to permit the seed to be well covered. When sown in the spring on winter grain, the seed bed is as a rule in good condition, and the seed will be covered by alternate freezing and thawing. When sown with spring grain, the seed bed is often not so firm as it should be for rapid germination. In such cases it is a good plan to roll the ground after seeding. When seeded without a nurse crop it should never be sown on land which has had no chance to settle. For this reason the land should be plowed some time before seeding and worked down by thorough cultivation. In the West, where spring seeding is always necessary, the best results are secured from fall-plowed land followed by early spring seeding.

Serviceable Floor for New House for Poultry

Here's a way to make a dry and serviceable floor for that new poultry house. Use four inches of good grade cinders covered with two layers of tar paper and three inches of cement on top. The cinders should not give any trouble from disintegration or allow the floor to sag or break, for they are often used in a similar way.

A thoroughly dry floor for the poultry is essential to success, according to the department of agricultural engineering at Iowa State college, which offers this suggestion.

Applying Raw Phosphate

Raw phosphate should be applied in time to be plowed under; and it is a good plan to disc the ground before plowing, so as to get the phosphate mixed well with the earth. Phosphorus does not become dissolved and move about in the soil water like nitrogen, and hence it is important that the phosphate be distributed throughout the soil as much as possible, to give the roots of plants the greatest opportunity to come into contact with it.
