Able to Hear Noises Made by Electrons

By means of the radio vacuum-tube amplifier, scientists have been able to hear the noises made by electrons, the infinitely small units of electricity as they are "bombarded" against the plate in the tube from the hot filament, says Popular Mechanics Magazine. These electrons, it is held, carry the current and make possible the operation of the tube, which is capable of tremendous amplification. Through this, a new way of measuring the value of the electron charge has been developed and a method of research opened which may lead to valuable knowledge concerning the electron and its properties. Previously, it has been studied by means of tiny drops of oil, observing their movements between two electrically charged plates. Droplets are made to fall slowly or rapidly, or are held stationary between the plates, according to the presence of charged electrons in them and the voltage applied to the plates. With proper amplification, the roar of the electrons in the tube can be magnified to produce a volume like that of Niagara, it is said, and this action is to be studied in the hope that facts not presented in the gravity tests will be learned.

Explaining Origin of the "Vegetable Dinner"

The death of Patterson M. Vegetable, one of the most cordially hated men in North America, brings to light for the first time the story of the invention which earned him the position he occupies, "C. F." writes in the Kansas City Star. It was the old, old story, yet ever new, of two men and a girl; in the ensuing triangle poor Patterson found himself hopelessly in the bypotenuse. Soured and embittered in love, he turned to the soil; and in his little truck garden on Long Island he devoted long hours to raising obnoxious species of plants and herbs. This morbid tendency led eventually to his famous invention of a platter with various compartments, into which he fitted one species of each unpleasant plant he had produced, calling the whole affair, in his dryly humorous way, a "dinner." The comparative economy of this idea appealed to the restaurateurs; and the embittered old man found the last years of his life considerably brightened by the sight of thousands of restaurant patrons seated before these plates endeavoring to eat one of Vegetable's "dinners," or "Vegetable dinners," as they came in time to be called.

Bugle Calls Ancient

Of very ancient origin are the various bugle calls still used by modern armies. The "tattoo" dates back to the Thirty-Years' war, from 1615 to 1648, and was originally the "tap to" call, a signal for the men to cease their drinking by closing the bung or "tap" of the barrel. "Retreat" call was used by the Crusaders. The cow's horn was the first bugle and it is mentioned in the Bible. The ram's horn was a later variation. Many students of musical apparatus say the bugle is the oldest of musical instruments.

Pertaining to Ages

A century begins with the beginning of the first day in its first year, and does not end until the close of the last day in its hundredth year. The mode of reckoning is often confused with the common mode of stating the age of a person. A person born at the beginning of the Christian era would be called one year old during his second year, that is during the course of the year two; he would be called two years during the year three; and forty during the year forty-one, etc.

Scotch Terriers

The first pair of Scotch terriers ever exhibited at a bench show in this country were shown to the public in 1833, at which time there was a decided dislike for the dogs, and the show was criticized for admitting the pair, but after Doctor Ewing of St. Louis and other men began developing the dogs and were able to show their finer qualities, public sentiment developed in their favor and Scotty is a welcome dog at all the bench shows and has won his way to national popularity.

Qualities of Sugar

The sweetness of sugar is tested by diluting each kind of sugar with an equal amount of water until only one tastes sweet. It is easy to confuse the sense of sweetness with other qualities of the sugar, one being the melting quality—that is, if the sugar melts easily in one's mouth, the sense of sweetness comes more rapidly than if the sugar dissolves slowly. All in all, it is believed that white sugar is sweeter than brown.

Atmosphere Above Earth

The exact height of the earth's atmosphere is not known. Some estimates, based on the calculated heights of shooting stars when they first become luminous, place the limit at which atmosphere has a density sufficient to produce any observable effects at about 200 miles. Very little oxygen is present in the air at a height of 110 kilometers (68.31 miles). There is none at a height of 120 kilometers (74.52 miles).

Effective Duster

You can make a duster that is invaluable for fine furniture by saturating a piece of cheesecloth in kerosene oil and hanging it out in the sunlight to dry.

Repression

"Repression is quite the thing in acting now. How can I study repression?" "Well, you might consider the wooden Indian."

Turn About. Wife—"I think you might talk to me while I sew." Husband—"Why don't you sew to me while I read?"—(L. & N. Employers' Magazine.)

What Men Live For

Everyone lives to accomplish his desires and ambitions.

The Bank of Cottage Grove aims to help each customer get what he wants out of life by suiting its banking service to his personal needs and by cheerful cooperation and friendly counsel.

Bank of Cottage Grove Service Is Successful Because It Helps People Succeed.
