

Halo Weather Forecast

Since halos occur in high thin clouds of small ice crystals, and since such clouds occur on the forward side of a widespread storm, or cyclone, it follows that rain or snow usually occurs within a day or two after a halo is seen.

Use Cycol and avoid frequent valve-grinding. This oil with "endurance beyond belief" reduces carbon trouble.

Stability The new Cycol will stand the hardest kind of usage. It is refined to meet the severest conditions of heat and pressure developed by the modern high compression engines, assuring you an unbroken oil film where heat, pressure and friction are greatest.

No Acids The new Cycol refining process eliminates the use of acids, though most refiners use them. While acids clear the "crude oil" they chemically change its structure and composition, thus seriously cutting its lubricating value.

The new refining process for Cycol is different in every respect. It selects from the "crude" those elements of greatest lubricating value and stability in performance, rejecting at the same time those elements which readily break down under engine heat and cause excessive carbon deposits.

So Cycol gives a protective oil film on cylinder walls and moving parts, not vapor at the breather pipe.

Less Carbon As to carbon, Cycol like all other oils deposits less carbon than any other oil. The most exhaustive tests have proven that statement.

And even more important, the carbon that is deposited by Cycol is soft and easily removable. It is not hard or sticky and cannot scratch a cylinder.

Prove it Yourself For these reasons you will find that Cycol gives you the finest results you have ever known—more perfect lubrication, "endurance beyond belief" and the elimination of carbon troubles.

So fill your crank case with Cycol. You can identify it by the new transparent green-gold color. Sold wherever the Associated Gasoline and Cycol Motor Oil signs are shown.
