Enduring as "Half Dome"

Cyclol... the oil with "endurance beyond belief"... eliminates carbon troubles.

Stability The new Cyclol will stand the hardest kind of usage. It is refined to meet the severest conditions of heat and pressure developed by the modern high compression engines, assuring you an unbroken oil film where heat, pressure and friction are greatest.

No Acids The new Cyclol refining process eliminates the use of acids, though most refiners use them. While acids clear the "crude oil" they chemically change its structure and composition, thus seriously cutting its lubricating value.

The new refining process of Cyclol is different in every respect. It selects from the "crude" those elements of greatest lubricating value and stability in performance, rejecting at the same time those elements which readily break down under engine heat and cause excessive carbon deposits.

So Cyclol gives a protective oil film on cylinder walls and moving parts, not vapor at the breather pipe.

Less Carbon As to carbon, Cyclol like all other oils deposits some carbon. But it deposits less carbon than any other oil. The most exhaustive tests have proven that statement.

And even more important, the carbon that is deposited by Cyclol is soft and easily removable. It is not hard or sticky and cannot scratch a cylinder.

Prove it Yourself For these reasons you will find that Cyclol gives you the finest results you have ever known—more perfect lubrication, "endurance beyond belief" and the elimination of carbon trouble.

So fill your crank case with Cyclol. You can identify it by the new transparent green-gold color.
