

ENDURING AS MOUNT HOOD

New Cylcol motor oil, with 'endurance beyond belief,' reduces carbon troubles

Stability The new Cylcol will stand the hardest kind of usage. It is refined to meet the severest conditions of heat and pressure developed by the modern high compression engines, assuring you an unbroken oil film where heat, pressure and friction are greatest.

No Acids The new Cylcol refining process eliminates the use of acids, though most refiners use them. While acids clear the "crude oil" they chemically change its structure and composition, thus seriously cutting its lubricating value.

Such oils break down under engine temperatures. They distill off and escape as vapor through the breather exhaust.

The new refining process of Cylcol selects from the "crude" those elements of greatest lubricating value and stability in performance, rejecting those elements which readily break down under engine heat and cause excessive carbon deposits.

So Cylcol gives a protective oil film on cylinder walls and moving parts, not vapor at the breather pipe.

Less Carbon As to carbon, Cylcol like all oils deposits some carbon. But it deposits less carbon than any other oil. The most exhaustive tests have proven that statement.

Even more important, the carbon that is deposited by Cylcol is soft and easily removable. It is not hard or sticky and cannot scratch a cylinder.

Prove it yourself Cylcol gives you the finest results you have ever known—more perfect lubrication, "endurance beyond belief" and the elimination of carbon troubles.

The woman dearly loved a lion and she talked about her new find until the other guests felt inclined to scream. "And do you know," she remarked in a vibrating voice, "he was wounded in 16 places." Lady Russell looked at her with a plaintive smile, then said: "I didn't know men had so many places."

You buy the best milk but ...

do you keep it cold enough always
to check the growth of bacteria?

GENERAL ELECTRIC Refrigerator

Even the best milk has a bacterial content which will multiply with alarming rapidity if kept at a temperature even two degrees above the danger point—50 degrees.

For safety's sake, all milk should be kept several degrees below 50. The average temperature of a General Electric Refrigerator under household conditions is 42 degrees. This is one vital reason why every homemaker should consider the need for scientifically correct refrigeration.

Time payments can be arranged, if you prefer.

As a special introductory offer, we will install the General Electric Refrigerator of your choice, for only \$10.00 down; the balance may be paid in a year and a half.
