Are you putting the cart before the horse?

The inexperienced should get the advice of the experienced before making investments with which they are not familiar.

Platinum's Many Uses

In addition to its fashionable duties in jewelry, platinum performs many little known but necessary services to mankind. Radio tubes require platinum; automobiles require platinum bolts for ignition; photographs, X-ray, blasting, medicine, dentistry, and the rayon industry employ platinum. Crucibles of platinum that withstand high temperatures and all acids except aqua regia are standard equipment in chemical laboratories.

Last but not least platinum is the famous "middle-man" of chemistry, the catalyst, which with the agency of electric current, performs marvels on many solutions and yet it is itself as unaffected and continuously powerful as the strong man of a vaudeville team.—National Geographic Society Bulletin.

Dead Letters

Despite the legend on the General Post Office building in New York city, "Neither snow nor rain nor heat nor gloom of night stays these couriers from the swift completion of their appointed rounds," which was said by Herodotus many centuries ago, the "couriers" suffer from one insurmountable difficulty—misdirected mail. More than 350,000 pieces of badly addressed mail flow daily into the New York post office, and about 80,000 letters bear as the address only the words "New York." A veritable army of separators is forced to correct the mistakes of careless letter addressers, despite the fact that most of the mail is entirely worthless advertising matter.

King of Vegetables

The onion, we now learn, is the king of vegetables. It is about 95 per cent water, but it is one of the most nutritious and wholesome of vegetables. It is ideal for supplementing a diet of salt meat, and it is therefore essential for the diet of woodsmen and sailors.

The onion is supposed to have originated in Central Asia ages before the dawn of historic times. It has been known and used in early Egypt and Palestine.

Total Air Traffic

According to the Department of Commerce, one square mile of air space can accommodate 65,980 airplanes. It is based on the calculation that 1,742 large planes can fly at the same level, allowing sufficient clearance between them over an area of a square mile. The same number can fly together 300 feet further up, and so on indefinitely. Assuming 12,000 feet to be the highest practicable elevation, the above total is reached.

Two Stores in Creswell Are Entered by Thieves

Valuable merchandise consisting of men's wearing apparel and groceries which were entered late Thursday night or early Friday morning.

Land Brothers Mercantile company and M. B. Clays' meat market were the losers. A number of dress shirts, silk hose, shoes, a lumberjack coat and a few groceries were missed at the Land Brothers store.

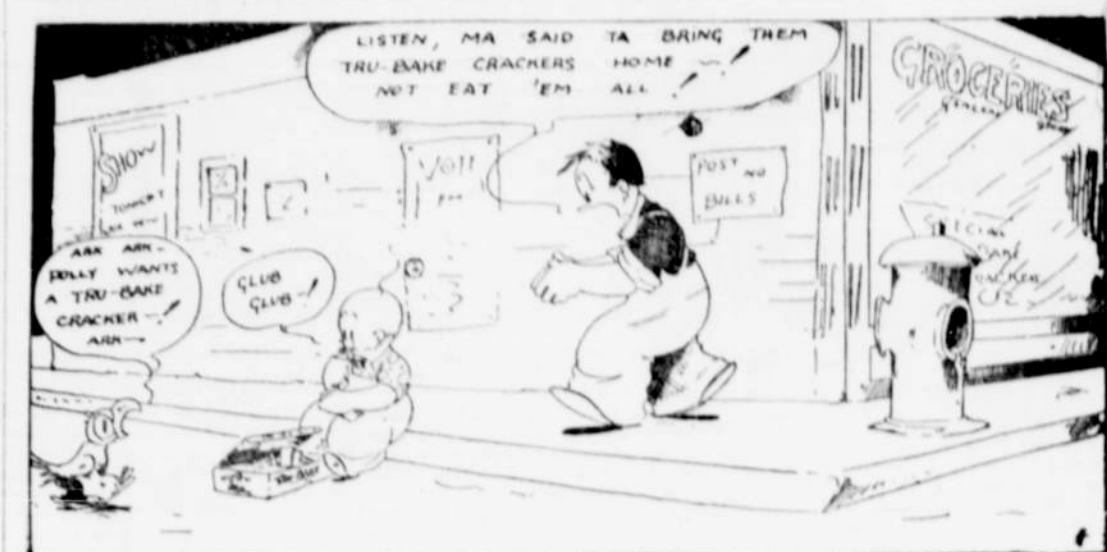

Mr. Clays reported the loss of fancy meats, cheese and valuable butcher knife. A small amount of money was taken from the cash registers of the two firms. Entry was made by tearing boards off a closed window and reaching in and forcing the lock on the door at the front street entrance of the building which houses the two firms and the Land feed store. The thieves took nothing from the feed store.

John Carlie and L. L. McBride, deputy sheriffs, investigated the burglary Friday morning after the sheriff's office had been notified and then came to Cottage Grove to question several transients who, it was thought, might have been implicated in the robbery.

Tru-Bake Crackers

...TEMPT...as only a thin, crisp, flaky, salty cracker can—when baked to the creamy brown that brings out the full nut-like flavor of fine white flour.

...SLENDERIZED...the Tru-Bake shape is distinctive. Makes for daintier serving; for crumbless eating. Actually, seems to make these crackers taste better!
