Youthful Lovers Made Victims of Unkind Fate

One of the minor executives in a large New York office and one of the secretaries had been carrying on a secret romance for some time, although no one in the establishment was aware of it.

Being an up-to-date young man, the executive, who shall be known only by his first name, Philip, to save embarrassment, carried on his courtship in a modern manner. Instead of writing her letters in the preliminary stage of his campaign he conceived the idea of waiting until the rest of the office had gone home and then speaking a few words into the dictaphone she used.

The next morning she would put on the ear phones and hear something along this line: "This is Philip, sweetheart. Don't forget I love you."

But one day the secretary was ill and could not report to work. The result was that her substitute, starting to transcribe the letter on the cylinder, heard the love message and burst into laughter.

Philip was unable to stand up under the razzing he received daily thereafter and soon found another position.—New York Sun.

Process of Leavening Bread Is Ancient One

Leavened bread, or bread which is made from distended dough, has been made since very early times. In fact, the leavening of bread was a practice known to the ancient Egyptians. They, in order to cause the new dough to rise, used to add a portion of dough which had been allowed to become sour. This old dough was called leaven, and gave the name to this process of breadmaking. This leaven evolved carbon dioxide gas in the dough and resulted in the formation of innumerable cells within the dough. These were distended by the heat of baking and the loaves formed presented an infinite number of minute honeycombed gas pockets. The same is the case when yeast is used. At the present day, thanks to research, more scientific methods of introducing carbon dioxide to dough to make it rise have been made available. Bakers have the choice of three—1, mechanical aeration; 2, use of yeast; 3, use of baking powders.

"Folk"

As used in Old English, folk is a collective noun meaning "people," having a plural of the same form meaning "peoples." In later English, the plural form folks was introduced. In present usage, the two plurals have become differentiated in sense, so that folk means "peoples," or, as a collective, "people," and folks, especially with an adjective (widely used colloquially in spite of the drawing room fastidiousness of some writers), means "persons," and the two are no longer to be employed indiscriminately. We say, "the conies are a feeble folk (not folks)"; "the old folks (not folk) at home"; "Folk-lore (that is, the lore of the people) is an interesting study."—Literary Digest.

Ladies Made Their Own Shoes

For the moment Miss Milbanke is still at Seaham, still earnestly writing poetry, and as a contrast making shoes. This activity was a by-product of the French revolution. Girls were, for some reason unexplained, taught to make their own shoes, and Annabella learned like the rest—apparently under Clermont's supervision, for the magazine displays an advertisement of "Messrs. Milbanke and Clermont's superior style of cutting shoes for ladies of fashion." Shoes, it is true, were fragile affairs, made of the thinnest kid or satin. . . . Poetry and shoemaking were part of the daily round.—From "The Life of Lady Byron," by Ethel Colburn Mayne.

Where Notables Gambled

In the Horse and Groom tavern, Streatham, London, is the direct successor of the famous old inn of the same name wherein the prince regent, afterward King George IV, used to foregather o' nights with his boon companions. In the spacious grounds at the rear, was a cockpit, where on one occasion, according to local tradition, was fought a main between birds owned by the prince and others belonging to Colonel McMahon and Doctor Marable, the stakes being one thousand guineas for each of the seven battles and five thousand guineas the main. Doctor Johnson, too, was a frequent visitor to the old house.

Island's Short Life

A submarine volcano may pile up a bank or form a new island. The standard example is Graham island, 30 miles southwest of Sicily; a ship passing thereby on June 28, 1831, felt a shock as if she had struck a sandbar, and on July 10 an eruption had begun which raised a new island that was at one time 200 feet high and three miles in circumference; after the close of the eruption the island was soon swept away by the waves, and it had been worn down to sea level by October in the same year.
