**A NORTH DAKOTA FARMER.**  
 A rotogravure section has just been issued by the Eugene Register and 45,000 copies of this are to be circulated in the Dakotas, Montana and Minnesota. The rotogravure work gives an artistic touch to the special edition, which is replete with pictures describing Oregon as a great fruit state and as one to attract the tourist.

A leading story tells of an idea that grew in the head of a former North Dakota farmer that has resulted in the Riv-u-let Fruit company that will this year use 55 cars of Oregon fruit. The North Dakota farmer is O. H. Heine, at one time a rancher west of Cottage Grove, where he owned the Riv-u-let ranch.

The story of the development of an idea is too long for repetition here, but The Sentinel would speak its appreciation of the efforts of this former North Dakota farmer. Thanks to his active imagination, and his tenacious sticking to an idea until he had put it over, Lane county can sell every pound of fruit that it will produce. That this is true is due to the fact that Heine, when he left North Dakota, became a resident of Lane county, and he has since that time been here ever since which time his heart has been with his old friends back in the Dakotas whom he wanted to have the Lane county fruit that he knew they ought to have. He has made this matter his own, and he has largely by his own efforts in developing his idea that folk in the central states would buy our fruit in quantities if they once tried it and it could be got to them. He did not receive much encouragement in the early development of his idea.

The rotogravure section of the Eugene Register was Heine's idea, and his company paid a large part of the expense of distributing this splendid piece of advertising. It has an appeal that should bring results far beyond any expense it has been to those in Lane county and Oregon who will benefit.

Heine is now endeavoring to put over his frozen strawberries idea. He has demonstrated here and elsewhere that, through freezing, fresh strawberries can be served at any time of year. This idea will make Lane county a market for every strawberry that it will produce. And his company contemplates entering the vegetable field. No one individual has done more for the products of the soil of Lane county, and we wish to offer this editorial posey to a live one.

**KEM'S TAX PANACEA.**

Elsewhere on this page O. M. Kem continues the discussion of a gross earnings tax as a substitute for all other taxes.  
 Mr. Kem believes that we failed to get the milk of the cocoon. On the other hand we believe that we understood his proposition fully, but evidently we did not make our objections plain.  
 When we said that thousands of acres of timber lands would escape taxation, we understood full well that any gross earnings from such timber would be taxed. At least, it was the idea of Mr. Kem that such gross incomes should be taxed. But there are hundreds of thousands of acres of land in Oregon that are earning no income of any kind that could be taxed. They are an annual expense to their owners, and the Lord only knows when evolution, revolution and cycloidal transformation of things inorganic into things organic would become conspicuously apparent to my optical nerves.—Kansas City Star.

**Letter Shows Edison's Keen Sense of Humor**  
 Thomas A. Edison once wrote his intimate friend, Albert B. Chandler, regarding a certain bill that "A. B. C." pay certain of his bills. The letter, the first lines of which Edison had crossed out lightly, with the obvious intention of their being read by Chandler, was written November 11, 1875. It follows:  
 "A. B. C.: Have you any idea? Of course you have. Do you think? Of course you think. What I want to say grammatically is: Can you pay one of the smallest of my bills tomorrow? If you can't it won't work extraordinary hardship to me, but if you could, I think under the benign influence of the comely greenbacks this beautiful world of ours would enhance in beauty. New wonders in the never-ending evolution, revolution and cycloidal transformation of things inorganic into things organic would become conspicuously apparent to my optical nerves.—Kansas City Star.

**Foreseeing End of Moon**  
 The Naval Observatory says it is stated by Jeffrey, who has made an elaborate mathematical investigation of the subject, that the moon will begin to return to the earth before it reaches twice its present distance and will continue to approach until it comes so near that it will be torn to pieces by the attraction of the earth. The fragments will then form a ring around the earth like that of Saturn. Russell, without disputing this conclusion, adds that the sun may have ceased to shine before this exceedingly slow recession and return of the moon are completed.

**Short, Short, Short Story**  
 One time a nice woman had a perfectly adorable husband. He was tall and handsome, neat, considerate and cheerful. So he never made faces at her when they played bridge and never brought comical looking people home to dinner and never walked on his heels when he danced with her or did anything that a nice woman's perfectly adorable husband wouldn't do. But one evening he came home and failed to notice she had gotten a new permanent wave—the big brute.—Kansas City Star.

**France Knows Tree Values**  
 In France, not so long ago, stretched a region of over 12,000,000 acres of marsh and shifting sands where only a few useless shrubs were able to make a bare living. It had been completely deforested. It was adding nothing to the wealth of France, says Forests and Mankind. Finally the government planted trees throughout the region, put them in care of their foresters, and today, this once worthless, abandoned piece of land, is worth over 100,000,000 and supports prosperous communities.

**First Movie in 1890**  
 The first practical camera capable of taking an unlimited number of photographs in rapid sequence upon a band of sensitized celluloid film, and suitable for subsequent reproduction in the form of a moving picture, is said to have been made by W. F. Greene, a London photographer. He took a patent on June 21, 1889, in conjunction with Mortimer Evans.  
 The traffic at Hyde Park corner was the subject of the first moving picture and it was shown to the Royal Photographic society in 1895.  
 Shortening may be saved by cooking doughnuts in a deep, heavy frying pan.

consin, Michigan or some other state. We could not hold the land, and we could not go into the other state to collect.  
 Under such a system we would take a slice from the money earned by the widow who does washing for a living, and collect nothing from many who might have great wealth in property, but might be living elsewhere, for example, are owned by a string of banks might live in Portland, which would result in gross earnings produced in Cottage Grove being taxed to support the city of Portland. Wholesale houses in Eugene, for example, are owned elsewhere, even out of the state. To correct such unfairness by taxing the income where produced would cause many taxpayers having scattered interests to maintain a staff of accountants to make certain that the tax were paid where earned.  
 A school district with great wealth in property and little wealth in gross earnings would not be difficult to locate. The county superintendent of any heavily timbered county could point them out. Timber not being cut—not earning anything—but homesteaders and small ranchers with children with every right to an education.

Coming right down to brass tacks, the man who can't see any good in the other fellow's side of a proposition is too prejudiced to make a good citizen.  
 The man with a swelled head fails to appreciate the advice that "there's lots of room at the top."  
 A subscriber wants to know where liars go to. Well, a lot of them haven't got there yet.

A person who swallows everything he hears, is unmercifully abusing his digestive system.  
 We men have to be bad, otherwise our wives could get no credit for reforming us.

The movie folk like California because the folk there are accustomed to being shocked.  
**Custom of Challenge by Gauntlet Kept Up**  
 Tossing gauntlets to the ground in challenge was not nearly so common in the old days as some novelists would have us think. In the first days of chain armor, there were no gauntlets at all. The hand was protected by a mitten attached to the sleeve. When gauntlets did begin to appear, in the days of the Fourth and Fifth crusades, they were cumbersome things which were strapped to the wrists so firmly that issuing a challenge by means of them would be more of a job than a hot-headed knight would care to undertake.  
 It was not until plate armor had reached its full glory that the gauntlet became symbolic of challenge. And it has rarely been anything else but a symbol. Even today, there is a personage in England—the king's champion—whose duty it is to cast a glove in Westminster abbey during the coronation of a king, and to cry loudly his willingness to fight any man who denies the new king's title.—Popular Biography.

**REASON FOR SUBSTITUTES.**  
 If the editor will see that the laboring man gets better wages, so he can afford to buy dairy products, they will not need to resort to substitutes. It is not because he and his family prefer them, but because they can't afford dairy products. I am not a socialist, as well as the poor man does, as there is no excuse for ignorance of the cause this day and age.  
 A THINKER.

**Pantomimes Ancient**  
 The first pantomime produced in England was at Drury Lane in 1702. It was called "The Taverne Builders." It was not until 1723, however, that the noted harlequin, John Rich, established the Christian pantomime. This form of entertainment had long been popular, having been at its height in Rome in the time of Nero. Pantomimes still has thousands of devotees throughout the world.

**These New Salts Are Wonderful**  
 That's Just What She Said—Just What He Said  
 And a Million Fat Folk Can't Be Wrong  
 When you take vitalizing Kruschen Salts for a few days that old indolent armchair feeling deserts you—it doesn't matter how fat you are—the urge for activity has got you—and you're stepping lively.  
 And best of all you like this activity—you walk a couple of miles and enjoy it—you thought you'd never dance again but you find you're getting as spry as ever—the old tingling active feeling reaches even your feet.  
 Kruschen is a combination of the six salts Nature has already put into your body to keep you alive—if it were not for these vital salts you could not live.  
 Why not try one 35 cent bottle of these rejuvenating salts—a bottle lasts 4 weeks and one bottle is enough to prove to you that Kruschen will make you feel younger—spryer—more energetic—you'll enjoy life—every minute of it.  
 As one stout woman wrote: "Kruschen Salts are worth their weight in gold to me."  
 A half teaspoonful in a glass of hot water every morning is all you need to keep healthy—keep your stomach, liver, bowels and kidneys in splendid condition—free your system from harmful toxins and acids.  
 Cottage Grove Pharmacy sells lots of Kruschen Salts—so do good druggists everywhere.

**HOW TO DARKEN GRAY HAIR**  
 Makes One Look Younger.  
 Men and women who used to be called Grandpa and Grandma are now setting the styles by darkening their gray hair at home.  
 For instance, J. A. McCrea, a well known Californian, recently made the following statement: "Anyone can prepare a simple mixture in five minutes, that will darken gray hair, and make it soft and glossy. Merely take a half-pint of water, add 1 ounce of bay rum, and a small box of Barbo Compound, and ½ ounce of glycerin. Apply to the hair twice weekly with a comb. It does not color the scalp, is not sticky or greasy and will not rub off."

**Old Doc Bird Says:**  
 STILL IT MUST BE CONFESSED THAT THE COTTON IN SOME WOOL SUITS LOOKS SHEEPISH.

**Gradient in Roads**  
 Gradient is the term usually applied to a road or railway for the degree of ascent or descent. The extent and amount may be noted in several ways. Thus a gradient of two degrees and fifty-two minutes is equal to a gradient of 5 per cent, which is equivalent to a rise or fall of five feet in one hundred feet. The gradient of a river or flow of water is known as its fall. Gradients are determined by a special grading instrument used by surveyors. It is a small telescope fitted with a spirit-level and a graduated arc.

**Farmers Should Promote Dairy Farming**

By F. G. HOLDEN  
 Field Director, Agricultural Extension Department, International Harvester Company.

There are few farmers who do not know the importance of raising dairy cattle. The millions of acres of worn-out land are testimony to the need of conserving soil fertility and this can be accomplished only by diversified farming, the growing of legume crops, the raising of dairy cattle and other livestock

and the placing of the manure back on the land.  
 Dairy cattle utilize cheap roughage, such as corn stover, fodder and straw, which usually goes to waste. Feeding the crops to dairy cattle and returning the manure to the land maintains the supply of nitrogen and other plant-food elements.

This not only means more prosperity for the farmers and the community but it means continued prosperity, and bankers can perform no greater service to the people than to encourage and, when necessary, finance the growing of dairy cattle.

An educational extension department should be a portion of the activities of every banking institution. This should be in charge of a trained and experienced agriculturist, who should act as a farm adviser.  
 He should keep in close touch with the farmers, and in every way

encourage the growing of dairy cattle. He should point out the increased profits that come from marketing grain and forage crops in the form of beef, pork, mutton or dairy products, and the importance of maintaining soil fertility. He should assist in organizing stock improvement associations in the community; help the farmers in marketing dairy products; take a leading part in the organization of agricultural fairs and exhibits, livestock shows and chautauques; be instrumental in forming calf, pig and poultry clubs and in interesting the boys and girls.

# Water Bonds Election!

## MONDAY, MARCH 24, 1930

### Polls Open 8 a. m. to 8 p. m.

Polling places: Armory for First Ward; City Hall for Second Ward; Cooper house, 1005 East Adams for Third Ward.

#### EXPLANATION OF THE BONDS

**NO NEW DEBT CREATED.**—No new debt or tax whatever in any form will be created by this issue, but a material saving to the water fund will result.

**RETIREMENT OF THESE BONDS.**—Following the practice adopted in recent years, definite dates are set for the retirement of this proposed bond issue. Payments from the water fund at the rate of \$5,000 the year are to start ten years from date of issue, and are to continue at that rate until the entire issue is retired in 1947. That the water fund will be able to meet these payments is explained in another paragraph.

**REASONS FOR THE BONDS.**—A \$20,000 issue of water bonds will become due July 1, 1930. No provision for retirement of these bonds was made when the bonds were issued, and the water fund will be unable to take them up except by this proposed new bond issue. Unless such an issue of bonds is approved by the people the city would be compelled to levy a tax for their payment. The water fund should pay these bonds, and it will do so if the new issue is authorized.

For several years the water fund has had outstanding warrants of \$14,000 to \$15,000. This condition has existed because of improvements made during recent years to give every portion of the city a constant and adequate supply of pure water, because of large installations of meters to insure every user paying the same price for the same service and to conserve the water supply, and because upkeep of lines was neglected for many years because of inadequacy of funds. Except for these outstanding warrants, the water fund, with receipts increasing annually and with the distribution system in a greatly improved condition, is in a healthy condition. Interest charges will be less on a bond issue than on warrants, and the council believes it is more business-like to have outstanding bonds, with a definite date set for payment, than to have a large amount of outstanding warrants that will be a drag for several years.

The \$20,000 required to refund the bonds, and the \$15,000 asked to retire warrants makes a total of \$35,000, the amount of bonds asked.

**REASONS WHY THESE BONDS CAN BE PAID AS THEY BECOME DUE.**—Every year for a term of years the water fund has been retiring \$6,000 of the issue of \$100,000 voted when the supply line was built to the national forests. Interest on this issue and on all other water bond issues has been paid promptly. This \$100,000 issue will be completely retired in 1935, before payment is to start on the proposed issue which the people are now asked to vote. With this burden lifted, and with increased receipts annually, the water fund should be easily able to meet payments on this issue as they fall due.

**WATER FUND ON SOUND BASIS.**—The condition of the water fund has greatly improved during recent years. A statement issued by the city engineer showed a profit of \$10,336 for 1929. This profit should increase annually with the growth of the city, especially as a large amount of new work that had been required for years has now been completed.

**COTTAGE GROVE BONDS SELL WELL.**—Because Cottage Grove has met every obligation promptly, its bonds sell at a premium and are readily disposed of to investors.

The city council believes it is entitled to have this issue voted by an overwhelming majority, to the end that it may continue its reputation for handling its financial affairs in a business-like way.

Prepared by order of the council.
