Mr. and Mrs. Jack Switzer and Mrs. Switzer's daughter and son, Unax and Wesley Whiteside, visited this week at Curtin, at the home of another daughter, Mrs. Glenn Crabb.

Two plots near Hampton court recently were discovered to be such "no man's land" when the Curry county council tried to buy them, and similar cases have turned up in the older and poorer parts of London.

The usual procedure is to have such land valued by a disinterested person and the money paid into court by the county council or incorporated town. Then if "nobody" ever shows up he can collect his money, knowing that his rights were looked after while he was gone.

Lawyer Specialists. Lawyers nowadays are fast becoming specialists. They have been described as social scientists, but they are not as good as that. However, the average student does not have the intimate knowledge of Blackstone, Coke, Middleton, Chitty and other authorities that were the boon companions of the scholars of other days. The law of today in its form and interpretation is vastly different from that of two generations ago, despite the fact that it is fundamentally a slave to precedent. But as the general practitioner in medicine has given place to the specialist, so is the transformation in the domain of law.—Los Angeles Times.

Regularity of feeding is one of the essentials to successful care of work horses.

Value of the Dairy Cow

By Edgar W. Cooley

Agricultural Extension Department International Harvester Company.

The dairy cow is by far the most economical producer of human food. The food produced by her is the most nourishing and helpful of all foods. The farmer who has a few dairy cows, a few chickens and a garden will always have plenty of food for himself and family besides having a surplus of dairy and poultry products to sell at good prices.

For each 100 pounds of food consumed the sheep produces only 2 1/2 pounds of edible food solids, a steer about five pounds, a hog about 15 pounds and the average dairy cow 18 pounds.

There are nearly 24 million dairy cows in the United States and the annual value of their product reaches the enormous figure of over one billion dollars. Only the corn crop exceeds dairy products as a source of income to the farmers of the nation.

The dairy cow brings in money all the year around. She brings in cash at the end of each month in the form of a check from the creamery and gives us additional profit each year in the form of a calf. What a cow produces today is sold tomorrow. If the producer when the market price of feed is high, her cream is sold when the market price of cream is high. There is small chance of having to sell dairy products for less than it costs to produce them.

The dairy cow distributes the demand for labor over the entire year. She increases the amount of pork production and decreases its cost by providing skinnings and butter-milk for feeding pigs. She furnishes a home market for hay, silage and other products easily grown on the farm.

From the grass of the pasture and the roughage of the field she creates the greatest product of the farm and puts back into the soil the fertility these things have taken from it.

The dairy cow has been called "the foster mother of the world," and no more fitting title could be bestowed upon her. Without milk children languish, adults decline, the vitality of the human race runs low.

Mrs. Ellen Spray of Possil, accompanied by her grandson, Junior Pitcher, visited here this week at the home of a son, Wilbur Spray.

Several to Take Swimming Lessons. Among Cottage Grove residents who plan to enroll in the swimming classes being offered at University of Oregon during Lane county swim week, May 12 to 21, are K. D. Baker, Miss Jewel McKenzie, Miss Lois Godard, Miss Mary Vinson, Llewellyn Rex, Cecil Wooley, Miss Virginia Hunt and Duncan P. Cameron. The group went to Eugene Friday night to make arrangements for the lessons. American Red Cross junior and senior life saving certificates will be awarded those who successfully pass the tests.

Model Airplanes Win Prizes. An air tournament for model airplanes was held Sunday at the local airport by the American Air Cadets of this city. First prize in the senior class went to Forest Lemley, whose twin pusher model flew 1479 feet. Llewellyn Rex's twin pusher model took second place, flying 1476 feet.

In the junior class Edison Lemley was first, his twin pusher model flying 370 feet. Leslie Cone was awarded a tie with Edison as there was confusion in the count at the landing of his model.

Men's Class Gets Publicity. Cottage Grove's community men's Sunday school class continues to get publicity for the city. A recent issue of the Eugene Guard carried a front page story, with an eight-column picture on an inside page.

Cottage Grove to Play Eugene. Cottage Grove high school will play a baseball game with Eugene high school Friday afternoon on Delbert Kelly field, weather conditions permitting.

Dead Sea Remarkable for Its Lack of Outlet. The Dead sea is, in itself, an interesting phenomenon. It is about 1,300 feet below the level of the not far off Mediterranean, and it receives its waters chiefly from one source, the River Jordan.

There are no especially saline features in the basin itself and but few in the waters which enter into it, but there is no egress whatever. Water leaves the Dead sea by evaporation only, and through countless milleniums such salt as there was has remained in the "sea," until now it is indescribably salty and bitter. The dryness of the atmosphere alone prevents the sea from overflowing.

I rebound myself of Doctor Johnson's remark to his biographer, in reply to his question, "Do you not think the Giant's causeway worth seeing?" "I do, sir, but not worth going to see." That is exactly my opinion of the Dead sea. —A. Edward Newton in the Atlantic Monthly.

Property Owned by "Nobody." "Nobody" has property rights that are respected in England. Every now and then the efforts of county authorities to acquire a piece of land for public purposes discloses that the land is owned by "nobody."
