What a Penny Can Do

I heard a wise man say: "Give crown and pounds and guineas, but not your heart away."

Young men, however, are apt to be careless of their hearts, mindful of their pounds and guineas, but rarely, very rarely, mindful of their pennies. A penny, they know, will tell them their weight, will purchase exactly one stick of chewing gum.

Some may even know that a penny will light a 40-watt bulb for four and a half hours. But pennies are generally a nuisance. You get them when you buy a newspaper. You can never tip with them.

But this a penny can do, so scorn it less; one penny can move a ton of coal one mile, almost by rail. By sea one penny can move a ton of coal fifteen miles, which, incidentally, is 79,200 feet—Fortune, the Business Magazine.

The Last Scrivener

"I am the last public scrivener in Paris. . . . A serious little man was speaking to a representative of the Paris Soir. "Things have changed," he continued, "and when the buildings about here are torn down I shall have to move. There are not so many letters to write now, for even the little maids have learned to pen their own love letters."

"I still have, however, enough clients to earn my living," over his modest office is the sign: "Public Scrivener." The profession was legalized in France by the law of the fourteenth century.—Exchange.

Why Not

Little Helen was sitting on Uncle Charlie's lap. He had been entertaining her, as uncles sometimes do, by drawing pictures for her.

"Now, Uncle Charlie, draw me a dish of mashed potatoes."

"Child," he laughed, "I can't draw that."

Helen looked quickly up at him, saying: "I don't see why. You know what they are. You have eaten them at our house, haven't you?"

Radium Disintegration

Atoms of radium are distinguished from atoms of non-radioactive substances by the property of spontaneous disintegration, which in the case of radium, consists in the ejection of an alpha-particle, which is a small piece of the central core or nucleus of the radium atom. This process transforms the radium atom into another chemical element. During disintegration atoms of radium also emit a radiation similar to X-rays.

Road Builders of the Past

Nobody knows who built the first road but remains have been found of a highway laid out by Cheops, builder of the great pyramid in Egypt, says the National Geographic Magazine. Babylon had three great highways, and the first levying of tolls in the history of highways took place on one of these Babylonian routes. The Carthaginians were the most scientific roadbuilders of ancient times, but the details of their construction have been lost.

Strategy

It was dark when Mary's mother returned from her afternoon of bridge. "Were you afraid after dark?" asked her mother.

"No, I just set the radio where a man was talking, so if any burglars came they would think daddy was at home," replied the calculating seven-year-old.
