

Apple Pomace Good Cow Feed, Tests Indicate

Large and increasing quantities of apples are ground and pressed in the manufacture of cider. In the past, little use has been made of the press cake or pomace which is often allowed to accumulate in huge heaps outside the building housing the cider press.

It has been the popular belief that apple pomace was comparatively worthless, or even dangerous, as a feed for live stock. Consequently, most of these pomace piles were allowed to decay or were hauled away as refuse. The pomace is highly palatable, and if animals were allowed free access to it they would likely eat enough to cause them to founder or bloat.

Several agricultural experiment stations have shown by feeding comparisons that silage made from apple pomace has nearly the same feeding value as corn silage.

Pomace stored in drums or barrels for two or three months before opening loses only a very small amount through surface spoilage. Otherwise it keeps in perfect condition, except for an apparently harmless discoloration of the portion in immediate contact with the iron walls of the containers. It is highly palatable and can be used in much the same way and to the same extent as corn silage.

Low-Cutting Corn Sled

Some farms are too small and others do not plant enough acreage in corn to justify purchase of a corn binder. In such instances corn cutting with the old-fashioned hand knife is a slow and toilsome job. But Uncle Sam has come to the rescue of such farmers by designing a corn-cutting sled which costs little to build, cuts two rows at a time and with which two men and a horse can cut as much in a day as with a standard one-row binder. It cuts so low on even ground that little stubble is left in which corn borers may hide and saves from 1,500 to 2,000 pounds more fodder to the acre.

Removing Horn

Live horn has very little hollow space. When dried or dead the inner horn can be readily removed leaving the hollow outer shell. On the cow says the Rural New-Yorker, horn is living tissue, and will bleed if cut sufficiently deep any place except near the tip. Some may cut the horn high with the mistaken idea it is more humane; actually it decreases bleeding very little if any. Cut the horn close to the head, taking a thin ring of skin all the way around.

Norway Not So Cold

Because the northern part of Norway tips into the Arctic circle the erroneous impression prevails that it is a cold country. Instead, it has milder climate than any other country in the same latitude.
