POSTWAR PLANS

To insure peace as long as possible, there is much being said and written on postwar plans and how to rehabilitate and adjust the millions of men and women in the new life to come once the war ends. As we have said such a policy isn't far-fetched; it's just good common sense. As one speaker asserted "we are in the war not merely to help win it, but to have a say in shaping up the affairs after victory has been won."

Millions of technicians and skilled mechanics will be available for peace-time duty. There are thousands of skilled mechanics and technical men and women in the armed forces in addition to the defense workers. Most of the workers want to continue working at about the same job after the war. More particularly is this true of the plane pilots, mechanics and technicians.

Locally we can not offer much inducements to those who may want to follow the civilian professions connected with the airplane industry, but we can offer a few things to help cushion the shock in the period of transition. So far as we know a few local postwar projects have been discussed like the installation of a sewer system, but nothing that would attract what we might term a new industry.

We are a lumbering center and when we speak of a new industry we think that perhaps it may be connected with the lumbering business. And this, too, is possible when we think of the new lumber products made possible by the application of chemistry. Perhaps some of the new products might be feasible, but the most would be discarded in a peace-time economy. What we are particularly interested in and what the forest laboratories are working on is to convert at least a portion of our present waste material into a useful product. This would create what we might term a new industry: a new industry for lumbering at least.

Plywood has found much favor as a war product and by all rights we should have a plywood factory here. But plywood isn't still what we are thinking of. We are thinking of the growing demand for prefabricated building materials, which are being used more and more in the farming areas because of the fact that the farmer can see the plan of his farm outbuildings; have the materials shipped to his farm and the buildings up within about a tenth of the time as would be required under the old method.

And the local angle is this, since we produce locally a good share of the lumber shipped out of this section, why not have the prefabrication plant at the source of supply. Of course nobody has cited any objections to this arrangement, because we have not yet sprung the idea on a lumberman, but it occurs to us that the old manufacturing plant here might be pointed out as the failure in the good old days and the reason why a plant of this sort would not work here. Our answer would be that the manufacturing company was not a prefabrication plant.

We are not practical lumbermen; not yet at least, but we will venture a prediction and the objectors may chalk this up on a board and wait and see what happens. We are entering a new era in the building industry, which will be opened after the war. Lumber must then compete with plastics, steels and other building materials. Unless further experiments with chemicals opens up something we now know nothing about the future will see lumber meet this competition through the manufacture of plywood and prefabricated building materials. All of which means that prefabricated building materials will be finished at the source of supply or shipped elsewhere. Why can't it be at the source of supply?

F. D. R. TURNCOAT, SAYS LAPOLLETTE

A copy of the Progressive, Lafollette magazine which reached our desk this week comes out with the startling statement that "The New Deal" is dead and that the progressives feel that they have been betrayed. This magazine says that displeasure over President Roosevelt's abandonment of the New Deal and progressive principles extends even to his wife, Mrs. Roosevelt, who blames two people for this change: Harry Hopkins and Winston Churchill.

The Progressive invites the public to look at the president's cabinet and high executives or advisory capacity, which it says with the single exception of Harold L. Ickes, every one of which is a business-minded, profit-minded, money-minded conservative or else a gutless liberal. What the Progressive particularly don't like was the way the president handled the Wallace-Jones feud.

The Progressive does not seem to like the fact that a good many of the college profs have recently been given their walking papers and these have been replaced largely by business men. Maybe this so-called liberal magazine has overlooked the fact that the president may be just getting around to fulfilling some of his 1932 campaign pledges.

A TIP FROM MUSSOLINI

It is becoming increasingly obvious that aspiring holders of public office are going to seek renewed tenure on the strength of their war records. No one should object to that. But what everyone should object to is the tendency to glorify government by intimating that it has fought the war almost singlehanded—even to the extent of being primarily responsible for the quantity and quality of tanks, planes and ships with which our men are fighting. That is the way of the dictators, to seize all the credit from private citizens for every achievement. And once they begin seizing the credit for the accomplishments of the people, experience has shown that they soon begin seizing the resources which made the accomplishments possible.

Therefore, it is imperative that the American people be not deluded as to how and by whom this war is being fought. Due credit should be given to the political and military leaders who are coordinating and directing the armed forces. Beyond that, the credit goes to the people for whatever degree of military success the nation may enjoy. The tanks, the jeeps, the planes and the ships were not created by government any more than were the men now in the service of their country.

The subsidies, ostensibly to "hold the line" are in themselves inflationary. But the main criticism that can be made against them is that they simply will not work. Our problem is too big. So big, apparently, that our hydra-headed food bureaucracy fails to see the fundamental differences between it and Britain's, and fails to work out a solution tailored to fit our own peculiar needs.—Dairy Farmers' Digest.

This Soldier May Be Your Boy

BUY WAR BONDS

I've got a home, too, Mister! Every extra bond you buy through the Payroll Savings Plan will help me get back to it. "Figure it out yourself."

TROUBLES OF OSTEO

With this small poem I want to show
The troubles of a guy with an Osteo
So give him a break if you think you can
And try to believe he once was a man.

He stumbles around with a hole in his head
He isn't alive and he isn't dead
They won't let him die and he can't get well
I'm telling the world it's really hell.

He can't eat grub 'cause his jaw's locked tight
So they keep him alive with a liquid diet
Orange and lemon juice and cream of wheat
Lord, what he'd give for a piece of meat!

The Doc looks at him and shakes his head
You hear him mutter, "He's better off dead."
But we'll try again—we'll operate.
That's sixteen times at the present date.

So they rush him away to the butcher shop
Grab their knives and carve and chop
Whittle and scrape as best they can
Then send him back, just half a man.

The nurse looks at him and heaves a sigh
And wonders will this poor goof ever die
But she does her best to ease his pain
In a few more days he's up again.

The years roll on until one day
We find the poor lad has passed away.
Then they dig a hole and roll him in
So now he's left behind this world of sin.

On a hunk of granite above his head
Are a few words carved and if they're read
By anyone who wants to know
He's died of old age and not an Osteo.

—Albert Payne.

"NEED" FOODS VERSUS "WANT" FOODS

Dr. H. A. Hagen
There is quite some difference between "Need" foods and "Want" foods.

Perhaps if we learn this difference now it will go easier with us when our food supply becomes more restricted, which from all indications it will.

Simply stated, "need" foods are those foods the body requires for physical sustenance or growth, repair, energy and fuel as the case may be. A "need" food is not necessarily a "want" food, in fact it may not be wanted at all.

"Want" foods or foods which are desired are not necessarily "need" foods, or foods which are required for the primal functions of life. In truth "want" foods may be the very foods we do not need.

All this may sound paradoxical but it does not want of truth. It is an absolute fact that what we need in the way of foods we often do not want—and what we most frequently want, we do not need.

Time and mechanization and the weakness of man have conspired to replace food "needs" with wants. This has been done by

changing natural hunger to acquired appetites until the latter have almost completely supplanted the former, until man today rejects "need" foods in preference to "want" foods.

Appetites for foods have been created through processing, sweetening, souring, salting, peppering and spicing.

Offensive in this class of foods have been, processed, refined cereals, and their sweetened by-products, as pastry, bread, etc. Equally offensive has been the elevation of sugar to a position of importance in our dietary. Coffee eliminates itself as it is not a food. The same is true of tea and cocoa.

Man eats many times the quantity of food he needs. Any person can prove this to his own satisfaction whenever he chooses. Unless the American table contains milk, butter, bread, potatoes, meat and a dessert we think we are being deprived or underfed.

The staples of bread, meat and potatoes, eaten all together form a vicious triangle. Any one of these three foods at any given meal combined with an abundance of leafy vegetables either raw or cooked serves far better than the three together and saves food and lives.

The unfortunate situation we are going to find ourselves in unless we change our Wants to Needs is a shortage of the "want" foods and yet an abundance of the "need" foods which we do not seem to want.

We can do one of two things. We can cultivate a desire for the "need" foods now and combine them properly, or we can go on unprepared and deprived of "want" foods later on.

"Need" foods are whole grains, fresh fruits and leafy vegetables, the tubers, as potatoes, carrots, beets, turnips, the legumes, as peas, beans, lentils, peanuts.

A "Need" meal is composed of any grain, fresh leafy vegetables, either raw or cooked; peas, beans or lentils with fresh leafy vegetables; peanuts with fresh or dried fruits or raw vegetables; cooked potatoes with fresh raw or cooked vegetables.

Even if we are deprived of all meat, all butter and milk, all dried fruits and cheese, essential for shipment to our fighting forces, the people on the home front can be well fed.

We must look to our whole grains, our fresh fruits and vegetables, the legumes, or nitrogenous foods and we will be healthfully sustained here at home.

NEW EUGENE JUSTICE OF THE PEACE

Howard M. Brownell, Eugene attorney, last Thursday afternoon was appointed justice of the peace of that district, succeeding John Bryson, who has been granted a leave of absence to enter the maritime service for the duration of the war. Bryson will leave September 1st and will train at Catalina Islands.

TEST INCIDENT SET FOR SEPTEMBER 2ND

H. E. Ferin, civilian defense commander of this district announced this morning that another test incident had been set for the evening of September 2nd. Following a meeting of the local air raid wardens this week, Damon Scott chief air raid warden said that all junior air raid wardens would have a part in the event. All officers are requested to be at their posts from 8:00 to 9:00 p. m. on the above date.

446,000 Fathers Are Needed to Fill Quota

Maj. Gen. Lewis B. Hershey, national selective service director, disclosed Tuesday at Washington that 446,000 fathers probably will have to be drafted before the end of the year to meet anticipated manpower requirements of 907,000 men for the armed forces between October 1 and December 31.

He explained in a letter to the 6500 local draft boards that the requirements for the last half of the year total 1,873,000 and that, aside from fathers, there are only 1,427,000 men available to fill these calls.

This, he said, leaves a probable shortage of 446,000 men.

WHEAT GOALS FOR 1944

State wheat acreage goals for 1944, representing an apportionment of the national goal of 68 million acres—26 percent above this year's seedings—were announced recently by the war food administration. County goals will be established on the basis of these state figures and will constitute the wheat goals farmers will be urged to meet in 1944. In broad terms, the WFA advises farmers to plant as much wheat as possible without departing from sound farming practices and after reserving sufficient land for expanding other urgently needed crops.

LATHAM SCHOOL STARTS SEPTEMBER 13

Most of the schools of this section are starting September 13th, while some are not starting until the 20th. The Latham school will open the 13th with S. T. Rose principal and teacher of the 7th and 8th grades; Miss Veda Gray will teach the 5th and 6th grades; Mrs. Frances Marquardt will have the 3rd and 4th grades, and the 1st and 2nd grades will be taught by Mrs. Ethel Sanders. John Lamb is custodian and bus driver for the Latham school.

What You Buy With WAR BONDS

When the American Expeditionary Force landed in Ireland recently newspapers reported the citizenry remarked at the similarity of the steel helmets worn by our boys with those worn by German troops. These steel hats are protection from shrapnel fragments and other light missiles. We need thousands of them for they are a regular issue to every American soldier.

A smart strap fastens under the chin and they are padded for comfort. One steel helmet costs \$5 so every time you fill a \$5 stamp book you are buying protection for an American soldier. Invest at least ten percent of your income in War Bonds every pay day. Help your community reach its War Bond Quota.

U. S. Treasury Department

Paper Has Many Uses

Paper is now used in making alarm clock and flashlight cases, clothes hangers, buttons, string, porch chairs, rugs, garbage pails, dustpans, mail boxes, blankets, and many other articles in order to save more essential materials.

AMERICAN HEROES

BY LEEF

When Richard Breckenridge's submarine made a hurried dive off Japan, a hatch jammed, but he ignored the order to abandon the rapidly flooding conning tower and remained behind, desperately trying to fasten it. By succeeding, he saved vital equipment for his submarine and became the first enlisted man in the submarine service to win the Navy Cross. He was willing to give his life. How much of your income will you invest in Payroll Savings?

CHRISTIAN SCIENCE CHURCHES

"MIND" was the subject of the Lesson-Sermon in all Churches of Christ, Scientist, on Sunday, August 22.

The Golden Text was, "Great is our Lord, and of great power: his understanding is infinite" (Ps. 147:5).

Among the citations which comprised the Lesson-Sermon was the following from the Bible: "All thy works shall praise thee, O Lord; and thy saints shall bless thee. Thy kingdom is an everlasting kingdom, and thy dominion endureth throughout all generations" (Ps. 145: 10, 13).

The Lesson-Sermon also included the following correlative passages from the Christian Science textbook, "Science and Health with Key to the Scriptures" by Mary Baker Eddy: "God, the divine Principle of man, and man in God's likeness are inseparable, harmonious, and eternal... God and man are not the same, but in the order of divine Science, God and man coexist and are eternal. God is the parent Mind, and man is God's spiritual offspring" (p. 335).

LIGHT RAINS, THUNDER STORM

A light rain fell here Saturday afternoon to boost the August moisture received in this section to slightly above the normal figure. The rain Saturday was followed by a thunder storm Monday night with another light sprinkle.

Several have commented on the cool nights like tail of the year and hot afternoons.
