**200,000 miles of new long distance circuits will be built in 1946**

Big expansion program under way to speed your calls

This year alone, as part of a \$400,000,000 five-year expansion program, more than 200,000 miles of new toll and long distance circuits are planned for the Pacific Coast.

For we're on our way to providing a broader and faster long distance service than you have ever had before.

Everything possible is being done to expand long distance facilities now and to prepare the way for many new improvements to come. We handled more than 346 million toll and long distance calls in 1945—nearly a million a day—and we're gearing up to handle an ever-increasing volume as the West continues to grow through the years to come.

## Alta Fescue With Subclover Found Best Pasture Mix

Western Oregon farmers faced with the problem of what to sow on the so-called "red hill" soils where a permanent pasture is desired can best plant alta fescue in mixture with Tallarook subterranean clover, according to a newly published Circular of Information No. 376 entitled "Results of Permanent Pasture Grass and Legume Experiment, Red Soils Experiment Area at Oregon City" by Edwin Keitner, superintendent.

As a project of the Oregon State college experiment station, six pasture grasses in general use in western Oregon were seeded alone and in mixture with subterranean clover and white clover in the fall of 1940. The grasses were: english rye grass, chewing fescue, alta fescue, red creeping fescue, orchard grass and highland bent grass. Seeding rates and fertilizer applications are included in the circular.

All of the plots received pasturing throughout the summer months by a herd of dairy heifers. From the palatability standpoint, english rye grass was the number one choice followed by little preference between alta fescue and orchard grass. The english rye grass provided only a short pasture season, however, and was gone soon after the rains ceased. The cattle showed a distinct liking for the mixed grass and clover seedings over grass planted alone.

On the basis of observations and yield, alta fescue and Tallarook subterranean clover fertilizer with 100 pounds of treble phosphate each fall proved to be the most desirable combination for a permanent pasture. This mixture rated well toward the top in palatability and produced a continued growth throughout the dry summer months. By its vigorous growth it practically eliminated foreign grasses and weeds after three years of pasturing.

The subterranean clover increased rather than decreased its stand in spite of constant pasturing.

The circular is available from any western Oregon county extension office.

### SAGINAW

The Friendly Neighbors club met with Mrs. Mildred Sharon Thursday afternoon. There were 13 members present and Mrs. E. C. Cloud and Mrs. Eva Hansen house guests of Mrs. Geo. Getty were visitors. Five dollars was donated to the Red Cross. In the contest given, Iris Gersbach won first prize and Nona Kirkendall won second. The next club meeting will be with Dora Stewart March 28.

About 20 school children enjoyed a party Friday evening at the home of Nelda Schwarzer.

Delmer Benston, Coxswain, whose ship is in dock at Seattle, had a few hours leave over the week end and came as far as Ridgefield, Wash., to the home of his sister, Mrs. Ed Kreber, and Sunday Mr. and Mrs. Lowell Benston and Earl Hayes drove up to the Kreber home for the day.

Tommy Getty left for Fort Lewis Monday to reenlist in the army air corps.
