"Is the Universe, Including Man, Evolved by Atomic Force?" is the subject of the lesson-sermon in all Churches of Christ, Scientist, on Sunday, June 20.

The golden text is, "Though there be that are called gods, whether in heaven or in earth (as there be gods many, and lords many,) but to us there is but one God, the Father, of whom are all things, and we in him" (1 Cor. 8: 5,6).

Among the citations which comprise the lesson-sermon is the following from the Bible: "For the Lord giveth wisdom: out of his mouth cometh knowledge and understanding" (Prov. 2:6), together with the following correlative passage from the Christian Science textbook, "Science and Health with Key to the Scriptures," by Mary Baker Eddy: "God expresses in man the infinite idea forever developing itself, broadening and rising higher and higher from a boundless basis" (p. 258).

Legumes Open Soil To Air and Water System of Rotation Prevents Compaction

Tight "stuffy" soils are robbing many farmers of high bushel-per-acre yields of corn and small grains each year. Loams, silt loams and clay loams need large amounts of organic matter in the plow layer and deeper to keep them open and loose for high crop production.

Heavy soils that are low in organic matter and worked with heavy tractors and machinery become

packed, especially just below the plow sole. These compactions slow down the intake of water. They cut down the amount of water and air the soil will hold for crop use. They keep the fibrous roots of corn and small grain "upstairs" away from water and plant food held deeper in the soil.

Temporary relief can be had by using machines that reach below the ordinary plow layer and break up the plow sole compactions. Real relief, however, comes only through regular use of deep-rooted legumes in the rotation.

The driving tap roots of sweet clover and alfalfa force their way through the compactions and reach deep into the soil, thus opening it to air and water. The mineralized organic matter they leave there improves soil tilth and furnishes plant food for other crops.

Channels of the tap roots are routes for water and air and fibrous roots to follow deep into the soil. Compaction-busting alfalfa and sweet clover need phosphate and potash if they are to do a good job.

Use of Vacuum Tubes Vacuum tubes, familiar in radio and television sets, are of vital importance in modern telephone systems and in airplane navigation. Their wartime application was extensive. Now the tubes are being used increasingly in machine tool production and electric power transmission.

THIS BROAD BASE OF UNIVERSAL SUFFRAGE ON WHICH OUR REPRESENTATIVE GOVERNMENT RESTS—OUR FREEDOM TO CHOOSE WHOM WE WANT TO REPRESENT US, SELECTING FROM A NUMBER OF CANDIDATES RATHER THAN RATIFYING A HAND-PICKED LIST—THE SAFEGUARDING OF OUR RIGHT TO VOTE AS INDIVIDUALS, BY SECRET BALLOT, DISTINGUISH US BEFORE ALL THE WORLD AS—

DRINKERS ASKED TO COMMUNICATE WITH AA

For proof that Alcoholics Anonymous is successful in restoring an uncontrolled drinker to a sane and happy life, visit one of the meetings any Saturday night in the council chambers of the city hall. Sessions start at 8:00 p.m. For appointment or literature write to box 13, Cottage Grove or phone 413J1.

Here is one of the principles on which the AA was founded: No one will attempt to tell whether another person is an alcoholic. This you must decide for yourself. Then with an open mind and a sincere desire, without any mental reservations, you may take the first step in AA.

When Ducks Cannot Fly Just before the molting period, ducks and geese fly to bodies of water where they will be safe from land enemies. The reason is the fact that they molt their primary feathers all at one time, and, for a short period, cannot fly.
