

FOREST FIRES
BURN
68 ACRES
EVERY MINUTE

YOUR CARE WILL HELP PREVENT FOREST FIRES

When forest lands are properly managed and protected, they keep on growing trees for tomorrow.

Wood is a wonderful material. It is best known in construction, for more than 80% of American homes have been built of wood. Chemists are working to achieve the goal of forest industries – to use all but the whisper of the pines.

This expanding usefulness is resulting in greater efforts to perpetuate this renewable resource. Forest industries are determined that forest lands will remain productive, producing the raw material for the "new age of wood."

WHEN WE KEEP OUR FORESTS GREEN, BY PREVENTING FOREST FIRES, WE ARE HELPING MAKE OUR COMMUNITY MORE SECURE.
