Fit Food Budget To Family Needs Says Home Expert

How much should I spend for food? Can a family be fed properly on \$20 a week? What share of the family income should go for food? Such questions are often asked home economists at Oregon State college.

But there just isn't any set answer, says Miss Mary Beth Minden, OSC extension home management specialist. She explains that no definite sum or share of income will insure a good diet for every family at all times. So to lay out a certain amount and then try to fit food purchases to it is putting the cart before the horse.

First, the individual family's food needs should be considered, Miss Minden emphasized. They will depend on the size of the family and the age and activity of each member. Then the homemaker can plan to meet these needs on either a moderate or a low cost budget.

A low cost diet includes more inexpensive foods, such as cereals, dry beans, peas and fewer of the more expensive items—meats, poultry, and out-of-season foods.

An adequate diet at any cost calls for about the same amounts of such protective foods as milk, vegetables, and fruit. Among these, however, there is considerable choice in prices of items that have about the same food value.

Seasonally plentiful fruits and vegetables are usually the thriftiest buys, the home management specialist says. Money can also be saved by using evaporated or dry milk in cooking, instead of whole milk, and by using lard for shortening instead of more costly fats. A budget-wise shopper will also choose meat that offers the most lean meat for the price per pound and trim away expensive fat and bone.

STATE MILK MARKETING EXPLAINED IN BULLETIN

Methods of pooling and the use of producer quotas in marketing fluid milk in Oregon are explained in a publication, "The Oregon Plan of Pooling Milk Produced for Fluid Markets," recently issued by the Oregon Milk Marketing administration. The bulletin describes how basic quota allotments are made to 2,500 Oregon milk producers each year in seven market pools and 47 distributor type pools to insure a constant supply of milk for a population of one and a half million people.
