## Uranium Booklet Printed by State

"Radioactive Minerals the Prospector Should Know" has just been published in its third edition by the State of Oregon Department of Geology and Mineral Industries. The new edition has been entirely revised and enlarged in order to incorporate the new developments that have been so rapidly taking place in the field of uranium prospecting. Author of the revised edition is Mr. Max Schafer, geologist at the Department's field office in Grants Pass. The 21-page booklet is designed to assist the prospector in searching for and recognizing uranium ores. It describes the economically important uranium minerals,

the major occurrences of uranium outside Oregon, particularly those in adjacent states, and the likely areas for uranium prospecting in Oregon. Described also are radiation detection instruments, methods of prospecting for uranium, mining regulations, and the Atomic Energy Commission ore purchase schedule. Atomic Energy Commission field offices as well as distributors of Geiger and scintillation counters are listed, and a selected bibliography is appended. The publication designated as Short Paper 18 may be obtained from the State Department of Geology and Mineral Industries at 1069 State Office Building in Portland or the field offices at Baker and Grants Pass. Price of booklet is 30 cents.
