THE EXAMINATION OF THE EYE

WE RENDER YOU EXPERT SERVICE

The examination of the eye, to be complete, must take into consideration points far deeper than a mere test for vision. Not only do we correct any defect found in the sight, but we also test the strength of the rotary muscles and correct any weakness found there, so that the eyes may work in unison and perform their functions without fatigue.

FITTING FRAMES AND MOUNTINGS
We pay particular attention to fitting frames and mountings so that the glasses will do the utmost good and not detract from the looks of the wearer. Unless the lenses are properly placed before the pupils of the eyes the result will not be satisfactory.

TORICS AND INVISIBLE BIPOCALS

We prescribe Toric or curved lenses in all cases because they allow a wider range of vision, fit closer to the eye and are more becoming. For persons needing glasses for both near and distant vision we supply bifocals which we have fitted with excellent success.
