TEASERS APPETITE

Getting tempting meals ready three times a day seven days in a week is a difficult problem for every housewife-and it is very seldom that hubby and the kids appreciate the hours of brain fag that go into the meals that come onto the table so tempting to the palate. This work can be made a pleasure to the housewife by the use

of many delicacies which we carry that add to the meal "just the thing" that is needed to put into it the desired relish. Don't fag your brain. Let us suggest. Phone us your order if you can't call in person.

KERR & SILSBY

Children's Eyes Are Often **Defective from Birth**

A serious problem that confronts parents is to know whether or not their children's eyes are normal. Quite a large percentage of school children are handicapped by defective vision without the parents being aware of the deficiency in their eyesight. This condition is sometimes indicated by backwardness in their studies, nervousness, or a general lack of interest in their or a general lack of interest in their work.

THEY SHOULD HAVE THEIR EYES TESTED

For the welfare of the child it is very important to have their eyes examined before school begins, or before their eyes are overtaxed by their studies. If taken in time, children frequently out-grow this trouble entirely, when neglect may result in a general breakdown of the whole nervous system.

A SIMPLE TEST WILL DETERMINE

Parents who are at all in doubt as to the condition of their children's eyes would do well to allow us to apply a simple test to determine whether or not there is cause for further research.
