KERR & SILSBY

THE EXAMINATION OF THE EYE

We Render You Expert Service

The examination of the eye, to be complete, must take into consideration points far deeper than a mere test for vision. Not only do we correct any defect found in the sight, but we also test the strength of the rotary muscles and correct any weakness found there, so that the eyes may work in perfect unison and perform their functions without fatigue.

Torics and Invisible Bifocals

We prescribe Toric or curved lenses in all cases because they allow a wider range of vision, fit closer to the eye, and are more becoming. For persons needing glasses for both near and distant vision we supply bifocals which we have fitted with excellent success.

D. J. SCHOLL

TALES OF THE TOWN

Mr. and Mrs. H. C. Riches, recent-

After the Moults—EGGS

Remember, going through the moult is like going through a long spell of sickness. To force out the old quills and grow new feathers saps a hen's vitality.

If you expect your hens to be fall producers and winter layers, then feed them Poultry Pan-a-acea during and after the moult.

Dr. Hess Poultry Pan-a-acea

WILL START YOUR PULLETS AND MOULTED HENS TO LAYING

It contains Tonics that put your moulted hens in fine condition—Tonics that tone up the dormant egg organs—Iron that gives a moulted, run-down hen rick, red blood and a red comb. It contains internal antiseptics that destroy disease germs that may be lurking in the system. No disease where Pan-a-acea is fed.

It brings back the singing—it brings back the scratching—it brings back the cackle. That's when you get eggs; and it's eggs you want—fall eggs, winter eggs—when eggs are eggs.

Feed Pan-a-acea to all your poultry to make and keep them healthy. A Brund & Company refunds your money if it does not do as claimed. Tell us how many fowls you have and we will tell you what sized package to buy. Always buy your Pan-a-acea according to the size of your flock.

Mrs. C. L. Churchill visited in Portland this week.

Wishing to improve our facilities to examine the different parts of the body and to treat different diseases I have just installed at the Cottage Grove Hospital one of the largest and most powerful X-Ray machines that is made at the present time. The machine requires a special transformer and wiring and is installed in a room especially arranged for it. It will take an X-Ray picture of any part of a person's body in a fraction of a second and with it one can see the lungs, heart, stomach and bowels as well as the bones in any part of the body. It is used to treat diseases of the stomach, lungs—especially to detect tuberculosis, kidneys, cancer and many skin diseases; also used to detect gall stones, kidney stones and tumors. All interested are invited to call and see the machine in operation.

Yours respectfully,
DR. S. M. WENDT, SURGEON.

JONES & EATON
