April 26-29 was the annubiology trip to the Malheur National Wildlife Refuge. Conducted by biology and botan instructor Bob Misley, the pur pose of this trip was to observ birds, geological formations, an native plants.

"The birds observed we mostly water-fowl and shot birds," said Misley, "includin egrets, great blue herons, sandhi cranes, Canada geese and man different species of ducks."

Shore birds are the wadin snipe-type birds, usually charaterized by long thin bills. The were represented by such kind as willets, avocets, sandpiper and dowitchers.

"Besides these, we also sa yellow-headed and redwing blac birds, as well as such songbird as warblers. Among several type of seagulls, we saw the Frat klin's gull, which is distinct b it's black head."

Most of these birds we observed at the marshes when they feed and nest.

Wright's Point and Diamor Craters were among some th geological sights examined.
