Tsunamis - March Awareness

A tsunami is a series of enormous ocean waves caused by earthquakes, underwater landslides, volcanic eruptions or asteroids. A tsunami can kill or injure people and damage or destroy buildings and infrastructure as waves come in and go out. Tsunamis can:

Travel 20-30 miles per hour with waves 10-100 feet high.

Cause flooding and disrupt transportation, power, communications and the water supply.

They can happen anywhere along U.S. coasts. Coasts that border the Pacific Ocean or Caribbean Sea have the greatest risk.

IF YOU ARE UNDER A TSUNAMI WARNING:

- If caused by an earthquake, **Drop, Cover, then Hold On** to protect yourself from the earthquake first.
- Get to high ground as far inland as possible
- Be alert to signs of a tsunami, such as a sudden rise or draining of ocean waters.
- Listen to emergency information and alerts. Always follow the instructions from local emergency managers.
- Evacuate: DO NOT wait! Leave as soon as you see any natural signs of a tsunami or receive an official tsunami warning.
- If you are in a boat, go out to sea.
