Microwave Oven SAFETY

With busy lives, families rely on the microwave oven as a quick way to heat up a meal, warm up a drink or defrost dinner. While the convenience of the microwave oven is something we take for granted, safety should not be. By following a few simple safety tips you can prevent painful burns

SAFETY TIPS

- PURCHASE a microwave oven that is listed by a qualified testing laboratory. Make sure to complete and return the product registration card. This way the manufacturer can reach you if there is a recall on the product.
- PLUG the microwave oven directly into the wall outlet — never use an extension cord.
- MAKE sure the microwave oven is at a safe height, within easy reach of all users.
- OPEN food slowly, away from the face. Hot steam or the food itself can cause burns.
- FOOD heats unevenly in microwave ovens. Stir and test before eating or giving to children.
- NEVER heat a baby bottle in the microwave. Since a microwave oven heats unevenly, it can create hot pockets, leading to burns. Warm a bottle in a bowl of warm—not hot or boiling—water, or by running it under the tap.

MICROWAVE USE

Always supervise children when they are using a microwave oven.

Use only microwave-safe food containers or dishes. Never use aluminum foil or metal in a microwave oven.

If you have a fire in the microwave, leave the door closed, turn the oven off and unplug it from the wall. If the fire does not go out, get outside and call 9-1-1.

FACT
Scald burns are the leading cause of injury from microwave ovens.
