### Plastics Industry Seeks to Gut OR's Recycling Law

The plastics industry is trying to undermine plastics recycling in Oregon by weakening a recycling law (SB 66) passed unanimously by the 1991 Oregon Legislature.

The law requires rigid plastic containers to be made with 25 percent recycled content. If a package cannot be made using recycled content, the law gives the plastics industry three other options including reusable packaging, reduced weight packaging or packaging being recycled at a 25 percent rate.

industry is still trying to weaken the bill through other means.

Since more than 50 percent of plastic packaging is food packaging, the proposed changes would mean that the majority of plastic packaging would not be required to meet any recycling standard at all. Under these changes plastic packaging such as milk jugs would not have to be recycled in the state.

"The 1991 legislature unanimously passed SB 66 because Oregonians recognized the need to improve plastics recycling in Oregon," said OSPIRG Environmental Advocate Lauri Aunan, a lead lobbyist for the law. "Oregonians do not want the plastics they recycled to be buried or burned, and that's why there was such strong citizen support for this law."

"There must be a partnership between government and industry for recycling to succeed. The plastics industry is now trying to back out of its commitment to reach the 25 percent recycling rate."

By requiring plastic packaging to be recycled, SB 66 will boost demand for recycled plastics.

Oregon plastics recycling programs are already in trouble because there is no demand for the recycled plastics. For example, in August 1992, Far West Fibers' 2-4-6 plastics recycling program in the Portland-Metropolitan area failed when the company could not even give the plastics away, and had to pay to have the collected plastics hauled to the nearest processor.

"If SB 66 is weakened by exempting food packaging from recycling standards, or by giving food packaging a delay in meeting the 1995 standards,

#### Who is the plastics industry?

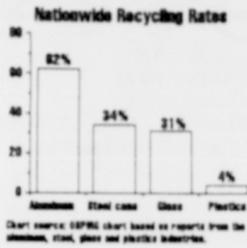

The "plastics industry" includes both producers of plastic and users of plastic. Some examples:

- Chevron Chemical Company
- Dow Chemical Company
- Du Pont
- Exxon
- Union Carbide Corporation
- Procter & Gamble
- Kraft General Foods
- Scott Paper Company

plastics recycling in Oregon may fail," added Aunan.

#### How you can help plastics recycling

1. Shop for packaging that you can recycle. If a product is available in plastic and in glass, paperboard or metal, choose the type of packaging that you can recycle in your community. It is usually easier to recycle glass or metal than plastic. In many cases, the plastic package is also more expensive.
2. Insist on recycled packaging. Tell your store and the manufacturer that you want packaging that you can recycle in your community and packaging that is made with recycled content (You can use the 1-800 number often printed on the label of a package to call the manufacturer.)
3. Support OSPIRG's plastics recycling agenda by signing OSPIRG's Plastics Recycling Campaign petition (available in Cannon Beach through Billy Hulst), or by meeting with or writing your local legislators to urge them to support the plastics recycling agenda.

In 1993 the SB 66 plastics recycling piece is under attack by the plastics industry who is trying to either exempt plastic food packaging from the law's recycling standards, or delay the law until 1997.

The plastics industry already tried to pressure the Department of Environmental Quality (DEQ) into recommending to the legislature to weaken the law, but due to citizen pressure (in fact the most citizen comment they ever had on any proposal), the DEQ did not make any recommendations that would weaken or compromise the plastics piece in SB 66. But the plastics

## Plastics Recycling Campaign

Dear Oregon Legislature:

We want to recycle plastic packaging, but we need help from the plastics industry to make plastics recycling work. We urge you to support plastics recycling by supporting the following legislation in 1993:

**Tough plastics recycling standards.** Senate Bill 66, passed in 1991, requires plastic packaging to meet 25% recycling rates in 1995. The legislature should stand firm on SB 66 and strengthen the law by requiring 50% plastics recycling by 2000.

**Truth-in-labeling law.** Plastics should not be labeled "recyclable" unless consumers have access to convenient recycling. Plastics should not be labeled "recycled" without disclosing the percentages of post-consumer and pre-consumer content.

**Recycling Market Development.** The legislature should assist industries to fund the Recycling Markets Development Council, and provide tax credits targeted to improve plastics recycling markets.

### SPUDS WILDLIFE COLUMN WINTER BIRDS

Birds become somewhat more apparent in the winter. As their background fades to neutral browns and greys, they in turn bring forward in brighter colours. Showing here are a few birds who have managed to attract attention this month. And there are plenty more. Not included: Robins (no), Starlings, Jays, Blue-headed vireos, Chickadees, etc.

The Varied Thrush is exactly the same size and shape as our common Robins. However, instead of gray and red, it's thrush is black or brown and orange.

The Bohemian Waxwing has bright red and gold highlights. It's often seen in the Cedar Waxwing - the difference is the patch of white on the Bohemian's wings.

Through a rare visit to our area this GATTLE EATER was allegedly seen by our Editor at a local site. The bird (and its friend) appeared to be just passing through.

An illusive Snowy Owl, rarely seen this far south, was spotted in Astoria. This particular bird is 33 feet tall and soft as a downy chick, though not as friendly.

Dear Upper Left Edge People!

Finally Trojan is closed, but the case is not closed. Far from it. In fact there are very serious questions pending regarding the safety of Trojan and other nuclear facilities throughout the country with the same equipment flaws.

We want the NRC to answer WHY it grants safety waivers to seriously failing facilities, WHY the dissenting scientists were not listened to in a timely manner in Trojan's case in a matter of such importance and consequence and Why nuclear industry mismanagement means profit for them and burdens for the people both financially and environmentally. CORPORATIONS AND REGULATORY AGENCIES MUST BE MADE TO BE ACCOUNTABLE FOR THEIR ACTIVITIES.

Now that Trojan is closed, all the villains on the scene want to sweep everything under the rug with more public relations explanations, without further investigation. But long time anti-nuclear activists who know the real history of Trojan very well are calling for Congressional Hearings to investigate the issue - not only for Oregonians, but for all those in the shadows of nuclear facilities who are facing similar problems all over the country.

As more nuclear facilities develop equipment flaws and are closed because of safety and economic reasons, decommissioning policies will have to become more defined. Trojan is case one. How this is handled here will set a precedent. If people everywhere demand Congressional Hearings now this case can influence how these policies may be set nationally.

We are fearful for business as usual from the NRC, DOE, PGE and Westinghouse. The results are disastrous for us and for generations to come.

Please feel free to use, edit, copy and distribute any of the enclosed info to get the word out. We can fight this one and win. We may not have a million dollars like PGE, but we're right.
