HOROSCOPES

By Soup Can Sam, Staff Astrologist

Aquarius (Jan. 20-Feb. 18)

Take a cue from Jupiter. He's not only the most dense planet in the solar system, he's the fastest. He also has 66 moons, so you know where the party is! The key to such bounty lies in a bazillion years of patience and astounding levels of galactic compression. Until then, when your life is at it's darkest, look up. You are not alone.

Pisces (Feb. 19-March 20) Venus is hanging around your house longer than usual so take advantage of the vapors! Breathe deep and let the hottest planet in the solar system soften you up a bit. Not literally, of course. The sulfuric acid and carbon dioxide levels would snuff you out like a bug. Figuratively, however, you're burning up with desire, and Venus is here to help. So breathe deep — and hit the dance floor! Come on! Vogue!

Aries (March 21-April 19) There will come a point when you will delete, wholesale, at least half of the 18,302 messages you have in your inbox. It will feel wonderful, and you'll wonder why you didn't do it sooner, and then you'll remember this horoscope and

freak out.

Taurus (April 20-May 20) Today could be the day. There is always that potential.

Gemini (May 21-June 20) Forgetfulness is an important function of the brain. Be thankful you don't remember everything, that moments have been lost forever, and that the awefulness that will be next Friday shall pass.

Cancer (June 21-July 22) Why, when you're surrounded by so much love and abundance, would you think that the best doesn't come until after you're dead? Take another look around you and reconsider where heaven really lies.

Leo (July 23-Aug. 22) Don't suck the joy out of today by worrying about tomorrow, and don't long for a new moon tomorrow when the one you have stands vigil every night. You have everything you need right here, right now.

Virgo (Aug. 23-Sept. 22) Wandering through your house of illusions again? Feeling like it's getting a little crowded in there lately? It will clear out near the end of the month, and that fog of delusional thinking, as cool as it can be, will lift. It will be replaced, however, with delirium, coupled with giggle fits like you haven't seen since third grade. This will

not be as much fun for the people around you as you would like to think.

Libra (Sept. 23-Oct. 22) Plant more, pick less.

Scorpio (Oct. 23-Nov. 21) Things will only get better once you start getting more sleep. When you sleep, you're not doing things, forcing those things to take care of themselves more often, and that's when things get better.

Sagittarius (Nov. 23-Dec. 23) This year is a leap year, which is totally awesome because it means we are going to make up for the quarter of a day we have lost for the past four new years. The leap day is especially auspicious for all things important.

Capricorn (Dec. 24-Jan. 19) When I was a wee undergrad at Soup Can College my friends used to tell me I wouldn't amount to anything more than a watery base of cream of tomato. But I studied hard and worked out and my can brain was soon filled with vegetables and noodles and chunks of chicken. This is all to say that you too can one day become a world renowned soup can staff writer so long as you focus your energy, do what you're passionate about and remember to eat well. But I'm forewarning you, you will probably never be as good as me.
