Here's a Sample

A prominent physician says that face powder causes asthma. It is certainly responsible for a lot of "wheezing" among the paragrappers.—Boston Transcript.

Personal Magnetism

Watches are sometimes very seriously affected by the magnetism of their wearers. In most cases those who have this effect are dark complexioned.

The Difference

The difference between a "tomato" and a tomato is regarded by some as the difference between "high culture" and agriculture, says the office boy.

This office can supply you with good gold, platinum and discarded jewelry. 6 ply card board in solid colors of red, blue and white.

UNIONVALE

Carl Launer and wife were McMinnville visitors one day this week.

Mrs. John Shippy accompanied her mother, who is suffering severely with rheumatism, to St. Martins Springs, Washington, where she expects to gain relief. They will be gone about two weeks.

Climate of Alaska Less Severe Than is Supposed

It is a surprise to many people, says the Weather Bureau of the United States Department of Agriculture, to learn that tropical daytime temperatures are recorded in Alaska every summer, and that there are parts of the Territory, notably in the Aleutian Islands and along the southern coast, where zero readings have never been observed.

While the climate of Alaska presents great contrasts and in some sections is quite rigorous at times, it is healthful and invigorating. The economic development that has already taken place in the Territory has been achieved largely through the aid of climatic conditions, rather than in spite of them. For example, the overland transportation of supplies, machinery, etc., for mining and other development work, would be impossible in a climate with winter temperatures above freezing, without the building of expensive roads and bridges. Modern tractors now draw great loads across frozen streams, bogs, and tundra to remote districts, with but little previous preparation of roads and trails. The excessive precipitation of southeastern Alaska has fostered the development of the vast mineral and timber resources of that district by making available an abundance of cheap hydro-electric power. Even the great fur-seal industry of the Pribilof Islands is largely dependent for its success on the excessive amount of cloudy and foggy weather that prevails there during the seal-taking season, since the seals can not be driven to slaughter during sunshiny weather without overheating them and lowering the quality of their fur.

As an illustration of the possibilities of agriculture in some of the interior valleys, it may be said that in the Fairbanks district, where spring wheat, oats potatoes, and other vegetables, and small fruits are successfully grown, there has been only one serious crop failure in the 19 years since farming was begun in that district. At Juneau, with a January mean of 27 degrees F. and a July mean of 57 degrees F. there is an average of only 105 days a year with freezing temperatures, and at Sitka only 100, as against 186 days at Bismark and 109 at Chicago. The summer temperatures of the interior are delightfully pleasant, and under the effect of prolonged daylight vegetation makes rapid growth. In the Tanana and Upper Yukon Valleys temperatures in excess of 90 degrees F. are occasionally recorded.

Unhealthy conditions of the udder and teats prevent normal milk flow. Serious disease often results from seemingly small irritations of the milk-producing organs unless they are given proper medical attention.

The remarkable penetrating qualities of

DR. KORINEK'S UDDER BALM

relieve such conditions almost overnight. UDDER BALM is a soothing, healing ointment for the prevention and treatment of Caked Bag, Garget, Cow Pox, Chapped Teats.

Its frequent use keeps the teats soft and pliable, and makes milking much easier.
