None Can Copy Its Chief Value

The Chassis is Patented

The Most Important Trend in the Industry

Two of every three buyers of Essex cars come to it from those who formerly owned cars bought chiefly for their low first price.

It is striking recognition of the fact that with all its superior performance, good looks and riding comfort, Essex is also the most economical car to own.

Essex is a totally different type. It gives results no other car ever gave.

Low price, without disappointment in looks or reliability.

Economy without sacrifice of performance.

Stability and highest roadability without unnecessary weight.

The riding ease of large, costly cars. The handling ease of a bicycle. Utter simplicity in design.

The lowest maintenance cost, we believe, of any car in the world.

These qualities make it the most wanted and largest selling car of its class in the world.

Just as the Coach body and Coach name have been extensively copied, even by costliest cars, so must future mechanical design seek to approximate the results Essex gives.

But these cannot be copied. The chassis is patented. The patents which make the Super-Six the most enduring, smoothest motor and give it all advantages, also prevent any from copying its chassis.

Price considered Essex gives the utmost in transportation value. By all means learn the facts. Ask Essex owners. Take a ride. Note its smooth performance, not surpassed by any car. How simply it handles. How luxurious its riding ease. Then think of its price. And consider that two of every three buyers of Essex cars come to it from those who formerly owned cars whose only appeal is low cost.

Surely you cannot be satisfied with less than Essex offers. Its cost is but little more than cars of the lowest price.

Essex Holds Its Own in any Company—in any Service

The black gooseberry borer, occurring as a large white grub in the roots and crown of the plants, appears to be rather widely distributed in Oregon and is seriously injurious on many of the plantings, the experiment station has learned. Growers about to plant gooseberries should examine carefully their stock and take every precaution to avoid infected bushes.

SEALED BIDS for 100 cords wood, first or second growth fir, will be received by the County Court at McMinnville, up to the 15th day of April, 1925. The Court reserves the right to reject any and all bids. Bids to be opened at 2:00 o'clock p. m. April 15, 1925 in County Court Room.

Elijah Corbett,
County Clerk.

Chemicals Kill Weeds

A formula for killing weeds, especially dandelions and other fleshy-rooted plants in lawns is explained in a new experiment station mimeograph as follows: Boil well, one-fourth ounce of white arsenic in one-half gallon of soft water. Add one zallon of soft water and one third ounce of caustic soda, and boil again. Dip the point of a sharp wooden stick in the solution, shake off the surplus, and prick the crown of the plant, which should die in two or three days. If desired, the amount may be reduced by dividing each quantity by three or four. This solution will injure the hands or clothing if allowed to come in contact with them. It is dangerously poisonous and should be kept under lock and key.

The main order of business in this burg seems to be the plowing and spading of gardens. Verily: the time has come to "tickle the earth with a hoe."
