

Here and Now

By O. Lawrence Hawthorne

I hear men talk so much about
Some great, uncertain day
When happiness at last will drive
Their miseries away,
When peace will shelter them from care
And fate will guide their feet
Along the endless paths of rest,
And joy will be complete.

They live in hope of better things
Tomorrow, in a land
Where all is rapturous and gay
And comforting and grand,
Where freedom opens wide the gates
To ecstasy supreme,
And leisure makes of days and nights
One long delightful dream.

But oh, how foolish is the plan,
How tragic is the fate
Of those who so delude themselves
Until it is too late!
Contentment sets no future time
To bless the lives of men,
For happiness is here and now
And never there and then!

Who Watches Your Water?

In the country, each household is responsible for its own water supply. Almost every home has its own well, pump or spring. It is up to the householder to see that the water is pure; if it is contaminated, it rarely affects more than a few people.

Towns and cities supply water to hundreds or thousands of people. The home which gets city water-supply cannot itself look after the purity of the water but must rely on the city to see that nothing harmful comes with it. One of the first duties of a city is to see that the water which it furnishes its citizens is not dangerous.

There are three great water-borne diseases: typhoid, dysentery and cholera. In past ages, before attention was paid to the importance of clean water, recurring epidemics of these diseases decimated cities almost everywhere. Long before their infective nature was recognized, it was found that by providing pure water the epidemics could be stopped, and that the diseases grew much less or even disappeared. The lesson was learned; but even now vigilance is the price of freedom from disease.

Two things must be done by every city providing water. The first, is to pick its source so that, as far as possible it shall be free from all likely contamination. This means that not only shall the water be pure as a usual thing but that it must be controlled so that no filth can get into it. A few years ago there was a sharp outbreak of typhoid fever in a town whose water was usually good. The water came from a brook which arose in the hills. It was found that during the winter a family living in the hills had had typhoid fever. Their wastes, which had been frozen on the ground through the cold weather (thus preserving the germs) were washed into the stream with the first spring rains. The epidemic of typhoid in town immediately followed. Here we had a source of water which was usually good, but could easily be contaminated, and was not thoroughly watched. If the water is not entirely pure and certain to remain so, the city must see that it is purified by filtration, chlorination, a combination of the two or some other approved method. Above all, the city must keep its water controlled by regular examination so that any contamination will be shown before it has a chance to do much harm.

It is most important that city councils realize their responsibility in this matter. Most water supplies are not dangerous most of the time. When they are suspicious, however, the greatest vigilance is necessary. One unexpected contamination can cause an epidemic after years of safety.

Mr. and Mrs. Pete Wansmaker, after a week's visit with relatives here and at Mill City, left for their home in Coulee City, Washington, Monday morning.

Fire Hazard

Owing to the continued dry period it is urged that all citizens of Dayton use every precaution to guard against fire. DO NOT burn rubbish or start grass fires until after a change in weather conditions. Help us protect your property interests.

Fire Chief

Farm Reminders

Losses in barn yard manure may be cut down by protecting it from leaching in the rainy season, keeping it moist in the dry season, and mixing with land plaster or superphosphate to prevent the escape of nitrogen in the form of ammonia, advises the Oregon experiment station.

Comparatively few Oregon growers produce certified potato seed. Three trips must be made by the extension service specialists to the farms of those who attempt it. The growers usually receive a premium for their seed, and a small fee is asked to help pay the expenses.

Electa Chapter Members Take Notice

The members of Electa Chapter No. 29, O. E. S. are hereby notified that a Service will be held at the Masonic Home at Forest Grove, July 19th at 2 p. m. Some are planning to go early and have lunch in the park. All going notify Mrs. Electa Demaray, W. M. Those not having automobiles will be invited by those who have.

Just to give you some idea of the traffic to the beaches on the 4th, we reproduce the following from the Tillamook Herald:

Over thirty thousand cars passed the highway intersection at Hebo in Tillamook county where the coast highway forks to Neskowin and Pacific City to the south and Oceanside, Netarts, Tillamook and Rockaway beaches to the north, from Friday noon, July 3 to midnight Sunday, July 5.

The official count, taken under direction of County Surveyor W. S. Coates, shows that during that time 30,988 passed the intersection 13,172 traveling toward Portland, 6,205 toward Neskowin, and 8,611 toward Tillamook. The heaviest traffic in that period was Sunday afternoon when 9,544 cars passed of which 4,432 were returning to Portland after their outings along the Tillamook beaches.

The traffic in all three directions Sunday afternoon was heavier than at any other time, according to Mr. Coates' count.

RESORTS CALL MANY

Beach resorts throughout the county were taxed for accommodations, and in many cases tent houses and cottages were all rented days before the Fourth.

H. Wyse Jones to Speak at Baptist Church

All old timers of Dayton will be glad to learn that H. Wyse Jones, formerly pastor of McMinville Baptist church, also Oregon State Evangelist, will speak at the local Baptist church next Sunday evening. He is, at the present time, Evangelist for New York State. He is an able speaker and both old friends and new will enjoy the treat in store for them.

Dayton took another baseball game from Newberg, Sunday, with a score of 7 to 11. The Hadley Bros. were the battery for the home boys.

Reunion of Nebraskans

The annual reunion of Nebraska folks in Oregon will occur this year at Colorado Lake, about three miles east of Corvallis in the grove where it was held last year, on Sunday, Aug. 2, 1925,—an all-day gathering. All are expected to bring baskets. There will be a program in the forenoon of music and short talks, furnished by some of the musicians and orators from the old home state, famous for its music and oratory. Coffee, etc. will be obtainable on the grounds. All Nebraskans who see this notice are requested to not only attend the reunion but to drop postal cards to their Nebraska friends and tell them about it. Come early. Program at 11 o'clock.

HOPS

Oregon Agricultural College, Corvallis, July 16—Hop growers who have been directing their sprays against the hop aphid already this season may have an additional pest to combat in the red spider, due to the hot weather, report the authorities for the experiment station. No control measures have been applied against the red spider this season so far, but some growers have already sprayed twice for hop aphid and may have to spray again.

A combination spray to control both pests has been shown to be practical. The formula for the spray is commercial concentrated lime sulfur, 2 gallons; calcium caseinate, 1 pound; sulfur (sublimated or dusting sulfur), 5 pounds; nicotine sulfate, 6 ounces; and water to make 100 gallons.

The powdered caseinate and sulfur are first thoroughly mixed together and then water added slowly, working the mixture into a thin, homogeneous paste. The commercial lime-sulfur is poured into the spray tank, and water added. As the tank is filling the sulfur paste added is poured through a strainer to remove the lumps. The nicotine sulfate is added last, just before spraying.

"Some growers obtained good results last season without adding the sulfur paste," says the station. "If this practice is followed, be sure to add the calcium caseinate to the tank after it is full and then add the nicotine just before spraying. In place of the calcium caseinate, one-half pound of hydrated lime added to one gallon of skim milk can be used.

"Growers who use quassa to control the aphid can combine their spray with lime sulfur in the same way as the nicotine. Soap is not necessary to use when the calcium caseinate spreader is used, and soap should not be combined or used in sprays that contain lime sulfur.

Christian Endeavor Convention

Rev. F. M. Fisher and wife, Lynn Gubser and daughter Neva, Bertha and Mildred Magness, Gladys Litscher and Clayton Willard of Dayton and Mrs. Rose E. Robertson of Lafayette have just returned from the Thirtieth International Christian Endeavor Convention, which was held at Portland, Oregon, from July 4 to July 10. The convention was attended by thousands and thousands of Christian Endeavorers from all parts of the United States and Canada. There were several representatives from foreign lands.

The theme of the convention was "Fidelity to Christian Endeavor Principles." Emphasis was placed upon the evangelistic, community and missionary activities of churches and the part played in these programs by the Christian Endeavor Society.

According to the reports made at the convention the Christian Endeavor movement is growing in towns and cities of North America and in foreign lands. The report made by General Secretary Edward P. Gates showed that 9,732 new Christian Endeavor Societies have been organized during the last two years. The membership throughout the world is approximately 4,000,000 in 80,000 societies.

The program for the next two years which has been outlined will include increased denominational loyalty and more inter-denominational co-operation. A definite program to attain standards decided upon at the convention has been given for each month for the next two years. In September, for instance, the goal of the international leaders is to enroll 500,000 young people for Bible reading and scripture memorizing. It was said at the convention that there never was a greater need than today for a more sincere study of God's Word and work.

One program definitely decided upon is to recruit thousands of young people into the church. This recruiting will require personal effort by each Christian Endeavorer. According to the leaders, young people can best be won to Christ by young people.

The event of greatest interest at the convention was the retirement from active service of Dr. Francis E. Clark, who forty-four years ago established the Christian Endeavor Society at Portland, Maine. Dr. Daniel A. Poling, co-minister of the Marble Collegiate Church, New York, who was born in Portland, Oregon, about forty years ago, was elected president of the United Society. Dr. Clark was elected president emeritus. In honor of his long service on a non-salaried basis, the trustees have arranged to establish what is called the Dr. Francis E. Clark Recognition Fund of \$100,000, whose income will be devoted to the support of Dr. and Mrs. Clark so long as both shall live. After they have been called to higher service the fund will be known then as the Francis E. Clark Memorial Fund, the income of which will then be devoted to the extension of Christian Endeavor work throughout the whole world.

Local Christian Endeavorers are confident that the attendance of the delegates from local societies will greatly help in the formation of new societies in this community and the recruiting of many young people not now associated with the Christian Endeavor movement.

Beauty Specialists Must Have License

It will be a violation of the law to engage in hair dressing, facial massage or skin treatment after July 31, 1925, without a state license. The office of the State Board of Health is receiving applications and it is absolutely necessary that all operators file at an early date. Anyone who has been actively engaged in cosmetic therapy six months prior to July 31, 1925, will be entitled to a license by exemption. Those applying at once can receive a license without an examination. All those applying after July 31, 1925 will be required to take an examination. Applications should be made directly to the Secretary of the State Board of Cosmetic Therapy, 301 Fitzpatrick Building, Portland, Oregon.

It is estimated that there are over two thousand cosmeticians operating in this state. To properly take care of the licensing thereof means a great deal of work and it will therefore be well to get applications in at as early a date as possible. No cosmetician will be allowed to operate after July 31, 1925 without a license.

FOOD SALE

The Ladies Aid of the Methodist church will hold a food sale Saturday, July 18, in the Demaray building next to the Hibbert Grocery. Sale will open at 9:00 a. m.

The Skins of the People

Written for the Oregon Tuberculosis Association—by Dr. B. S. Herben of New York.

Taking away the skins of the people is something which any summer sun can do. Behold the blisters and the peeling of the beach-combers. Indirectly intense heat may cause loss of skin for heat rash, with its itching, lead idle fingers into mischievous digging.

The suffering which hot weather brings is not always due to spectacular stroke or prostration but may be brought about by various skin diseases and irritations and of these summer sufferers little children and infants rank first. The attendant loss of appetite and sleep undermines the health and this together with other factors may cause summer diarrheas and similar serious conditions to follow in the wake of a heat wave.

Sunburns should be treated with the same respect that you would give to burns from any other cause. Slight surface redness without soreness can be relieved by a bath of hot water. Deeper burns should be covered with bland powders and ointments and blistered skins should be dressed by the family physician that they may not become infected or leave scars.

Heat rash or prickly heat is a disease of the glands in the skin which produce the sweat, that cooling moisture on the surface which keeps the body from having fever on hot days. These glands if compelled to overwork become irritated and inflamed. Compulsion is exerted by intense heat, too much clothing, working in high artificial heat, and over-indulgence in alcoholic drinks.

The trunk is usually first involved in heat rash though the tiny cyst like points surrounded with red halos may spread and cover most of the body. Itching and burning develop to make the patient restless, cross and sometimes feverish and even nauseated.

Absolute cleanliness of the skin is essential. Dusting powders may be used and thick applications of ordinary baking powder made wet enough to stick on the skin relieves the itching. Menthol and other special medicines should be prescribed by the family doctor, and he should be entrusted with treatment in all severe cases lest serious skin infections or eczema develop.

Tan is a protection and evidence of healthy reactions. Freckles are results of imperfect tanning, harmless as long as unheeded.

Your skin is part of your cooling system, keep it clean and in working order.

Oregon Agricultural College, Corvallis, July 16—Miss Helen Roseman, '25, of Dayton, has accepted the appointment to teach home economics in the Coquille high school next year. Teachers from the school of vocational education of O. A. C. are rapidly being placed in teaching positions throughout Oregon and the entire country.

AGENTS WANTED—Full or part time to sell Blanche Thermostatic Automatic Carburetor Control for Ford Cars and Trucks. GUARANTEED to increase mileage 50 percent to 100 percent. Write immediately for BIG PROFIT offer to P. O., Box 171, Oregon City, Oregon.
