## VIRGN CEDAR TRACT RESERVED AS MUSEUM PIECE

Eleven hundred acres of virgin Port Orford Cedar timber have been proclaimed a "Natural Area" by order of Chief Forester Silcox, to be kept forever in its pristine condition. This area lies within the Port Orford Cedar Experimental Forest on the south Fork of the Coquille river, which is a part of the Siskiyou National Forest. This withdrawal was made on the recommendation of Regional Forester Buck and Experiment Station Director Munger in accordance with a regulation of the Department of Agriculture that typical examples of the principal forest types shall be reserved, untouched by man, for posterity to enjoy and study. The tract contains some splendid groups of this valuable and fast-disappearing species and is so located that it will be safe from inroads of fire and logging when neighboring territory is exploited.

At the present rate of cutting, virgin tracts of Port Orford cedar will soon be a rarity except on federal lands within the national forests. The forest survey recently completed by the federal forest experiment station indicates that there is only about 1,140 million board feet of this cedar in existence, all in southwestern Oregon except for a small amount in northern California. Sixty-nine percent of this timber is in private ownership, 15 per cent on the Oregon and California Railway revealed grant lands managed by the Department of the Interior, and 16 per cent on the national forests managed by the Department of Agriculture. The annual cut in recent years averages about 48 million board feet, nearly all coming from private lands and from the O & C revested lands.
