Frank G. Clark et al to Emil Nelson, 1.67 acres in section 7, township 3 south range 2 east; \$800.

Charles O. Davis et ux. to Mary F. Thompson, N. E. $\frac{1}{4}$ of the S. W. $\frac{1}{4}$ of section 13, township 2 south range 3 east; \$10.

ABOUT THE DAIRY.

Each dairyman should select his breed and stick to it.

Select the very best bull of the chosen breed that it is possible to get.

The cow that is going to yield a good return in milk must have succulence in her ration.

Cheapering the cost of production without lessening the same is one way of building up the profits or really adding to the price of a dairy article.

Broad minded intelligence, great good nature and innate kindness are essentials in the makeup of a successful dairyman.

KEEPING UP MILK FLOW AFTER CALVING

Greatest results are attained from the feeding that is practiced the four weeks preceding and the four weeks following freshening, says Hugh G. Van Pelt. If all has gone well the cow has almost reached the limit of her feeding capacity and the limit of her milk producing ability at the end of thirty days after freshening. A perceptible change has been made in her appearance, much of the beefy conformation has disappeared and she has taken on a decided dairy form. The surplus fat has been transferred from the body to the pail.

The problem is now to hold the milk flow and the most ideal working form. Recognizing that some foods tend to create energy and fatten the animal when fed heavily enough and others furnish milk making nutrients and that the cow, whatever else she may be, is a machine kept on the farm to convert these feeds into milk and butter fat, the feeder with the scales and a variety of feeds can so combine and feed them in such amounts as to accomplish any reasonable purpose he may choose if the machine is efficient. From day to day and from week to week the ration should be varied gradually, adding to or taking from the ration foods of one character, then another, catering always not only to the demand, but also to the likes and dislikes of the individual in charge. Great records are never secured by the dozen, but always by studying and catering to the individual cow.

Anxiety for great records should never tempt overfeeding, though it of ten does, and many cows are ruined

For many years the Brown Swiss cattle were bred as dual purpose stock. As a result they progressed slowly in this country. Some years ago they declared themselves as a special dairy breed, and since that time they have been breeding away from the beef making characteristics and as a result have made wonderful advancement during the past eight years and are now being recognized very favorably as one of the special dairy breeds. The cow pictured is a pure bred Brown Swiss.

and scores of records made smaller because of too much feed. There is always more danger of overfeeding than underfeeding, but this danger is greatly lessened where the scales are employed.

Many facts pertaining to feeding come from experience and, though well known to the feeder, are difficult to express clearly in words, but suffice to say that, in addition to all knowledge known to the art, the herdsman must always, with the interest in results, at least keep in mind the condition of the animal and be prepared to decrease the ration at the first indication of the animal going "off feed."

At best cows working hard for long periods tire of their feed and weaken under continued pressure. It is well occasionally to substitute for one feed a bran mash to rest and cool, so to speak, the digestive tract. An indication of digestive troubles should receive prompt attention and a corrective in the form of raw linseed oil, salts or other laxative given.

HILL CREST

W. F. Honey and son were out from Gresham Thursday looking after their interests. They are figuring on getting Mr. Siros from near Cherryville to move out to their place and do some improving.

Fred Beechill, of Brightwood, is fixing up the road through here.

Joe White's brother and family, of Portland were out visiting at the White home Monday.

J. A. Rowe has traded for a milk cow.

Oscar Smith has been busy with his garden for a few days.

Mr. and Mrs. J. F. Watkins and son, J. B. were out visiting the first of the week with their son and brother, H. H. Watkins.

Joe White and son, Staff, were over to Louie VanDemoorle's near Firwood, Wednesday.

Oscar Smith took Byron to Portland Sunday to see the eye specialist.

Mr. and Mrs. J. F. Watkins returned to Portland Wednesday accompanied by their grandson, Raymond Watkins.

FEEDING THE EWES.

Rations Recommended Before and After Lambing Time.

Ewes before lambing should receive a good, wholesome feed, which will keep them in a laxative condition, says the Iowa Homestead. During the winter they should receive well cured clover or alfalfa hay with a small grain ration, and if possible a few roots or a little silage, although silage sometimes causes trouble when fed by an inexperienced person.

The grain ration most widely recommended is one composed of peas, oats or bran, or a mixture of these, and fed at the rate of about half a pound a day up until lambing time approaches, when the amount of grain may be increased provided the ewes have plenty of exercise.

After lambing the ewes should be liberally fed on any good succulent feed before they are turned on pasture, including plenty of grain and good hay. Scotch shepherds prefer roots, but most men in this country feed silage. About two pounds of clover hay and from one to two pounds of grain will be required for the best progress of the ewe and the lamb. The grain should consist of oats and bran,

with a little oil meal added. The oil meal is particularly necessary if you do not have silage. As soon as the grass has made a sufficient growth the grain may be reduced and shortly eliminated.

For Brittle Hoofs.

The hoofs may be improved by soaking in water or a clay bath twice a week. Some individuals have brittle hoofs, and, while they can be improved by soaking, they cannot be made as sound as hoofs that are highly elastic and durable.

CHERRYVILLE

The joy riders fill the roads and mountains.

Biggest run of autos ever known through here on the 3rd and 4th. As near as could be estimated they numbered over

Mrs. Lillian Airtrop, of Gardena, California, and sister to the assistant post mistress there was up for a visit to the Bungalow.

The Cook ranch on Cedar Creek was appraised by three of our citizens and divided among the heirs.

Mr. Bowman who has a place up near the Arrah Wanna hotel was in town last week and says he has 200,000 or more Eastern Brook trout in his

He says these trout grow faster than mountain trout and often attain size of three bounds in two years. The state will furnish anyone a start in these fish or other kinds and it is a wonder more people do not engage in this industry as these pure mountain streams are just the thing.

Mrs. Elizabeth Shank produced some lettuce this year of the Paris or White Cot variety that was a curiosity. It attained a growth of nearly two feet in height and the large pointed leaves stood upright and were very tender and crisp throughout. By tying the tops together like cauliflower the heart or head is kept in a creamy white condition. Great quantities of this could be raised on a small tract and sold to summer hotels.

The five year old son of Mr. and Mrs. Bradley, of Portland, who was staying up at Welches for his health passed away suddenly last Wednesday and was buried in our cemetery here on Friday. He was in the last stages of consumption when the parents decided to try the mountains, but it was too late.

Cottage Grove Sentinel;--Protection from freak laws and confiscatory legislation is all the bonus capital asks of Oregon.

Oregon City--Latest effort to pave Main street is award of contract for so-called Worswick asphaltic concrete at \$1.20 per yard.

Portland musicians union demand to fix wages and number of players who shall be employed meeting with united resistance from hotels, restaurants and theaters.

Kalena Hatter toilet articles manufacturing company removed from Pendleton to Portland.
