BROAD TRACKS
tread lightly

The ground pressure of the average horse's hoof is 25 lbs. per square inch — of the average man's foot, 8 lbs. Yet, because its weight is spread over so many square feet of ground-gripping track surface, pressure under a "Caterpillar" Diesel Tractor is only 6 lbs. per square inch. That's why "Caterpillar" track-type Tractors tread firmly but don't pack the soil.
