Vacuum Cleaner Care Aids in Better Work

If any vacuum cleaner could talk, it would probably shout, "Please empty the bag". Regardless of the type of cleaner, they all draw air and dirt in through the nozzle. This air-dirt mixture flows through the cleaner to the bag or dirst receptacle. Here the dirt is filtered out as the air passes through a porus material which may be fabric or paper. The dirt remains "in the bag."

If the cleaner is to operate efficiently, this dirt must be removed frequently. If allowed to collect, it will block the free-flow of air, reduce the suction at the nozzle end of the cleaner, and reduce the cleaning ability of the machine.

Yes, the secret of good vacuum cleaning is in the care you take of the bag. It should be emptied following any thorough cleaning of an average sized home. Occasionally a cloth bag may be reversed and brushed clean. The user of a cleaner having disposable inserts for the bag should remember that a "too full' bag will also reduce the cleaning ability of that machine. It is poor economy to use a disposable bag too long.

The secret to good operation of a vacuum cleaner is a clean bag.
