

Classes prepare students for new careers

Automotive Mechanics. Dental Hygiene. Floristry. Machine Shop Technology. Television Production Technology. Welding.

These are only six of 48 vocational and technical programs offered at Mt. Hood Community College.

In 1971-72, more Mt. Hood students were enrolled in vo-tech curriculums than in lower division college transfer programs. The popularity will likely continue in '72-'73.

Vo-tech programs lead either to an associate degree or certificate.

The associate degree program is two years of specialized study designed to prepare the student to enter a specific career.

The certificate program is shorter in duration and more occupational-extension oriented.

Two new vo-tech programs will be augmented this fall.

Graphics technology will teach students the art of printing and design techniques. They will be trained to be printers, small press operators, graphic photographers and specialists in print production.

Occupational Safety & Health Technology will prepare

students for careers as plant or job safety inspectors, or as para-professional safety supervisors.

Mt. Hood vocational and technical programs include:

- Accounting Technology
- Administrative Secretary
- Air Traffic Management
- Architectural Structural Technology
- Automotive Mechanics
- Automotive Parts Management
- Banking and Finance
- Civil Engineering Technology
- Clerk Typist
- Cosmetology
- Dental Hygiene
- Electronic Mechanic
- Fisheries Technology
- Floristry
- Food Processing Technology
- Forestry Technology
- Funeral Service Education
- Graphics Technology
- Import Auto Mechanics
- Inhalation Therapy
- Journalism Arts Technology
- Legal Secretary
- Machine Drafting and Design Technology
- Machine Shop Technology
- Medical Receptionist
- Medical Secretary
- Mental Health Worker
- Mid-Management
- Nursing Assistant
- Practical Nursing
- Associate Degree Nursing
- Occupational Therapy Assistant
- Occupational Safety & Health Technology
- Office Machine Repair Technology
- Operating Room Technology
- Ornamental Horticulture
- Physical Therapy Assistant
- Professional Pilot—Air Traffic Control
- Professional Pilot—Business
- Radio Production Technology
- Real Estate
- Registered Nurse Refresher Supervision
- Television Production Technology
- Transportation and Distribution
- Ward Secretary
- Welding

MANY STUDENTS enroll at MHCC for its men. automotive curriculum—women as well as

(Spens photo)

Digging reveals culture

John Woodward likes to teach out-of-doors.

He is an instructor of anthropology and sociology at Mt. Hood Community College.

One of his favorite courses, Oregon Archaeology, allows him many hours to teach outside.

The summer course, offered for a second time at MHCC, involved digging for artifacts, 8:30 a.m. - 5 p.m., every Tuesday and Thursday.

The class spent five weeks digging at two sites. One is near Barton Park on the Clackamas River. The other is near the town of Eagle Creek, also along the Clackamas River.

"We were at the first site longer," said Woodward. "It had been the location of an Indian village about the time of Lewis and Clark the early 1800's."

No previous digging had been done at the site. It was on private property.

"The owners were always most eager to help. They understood the educational value."

The Barton Park site produced a variety of objects—some Indian stonework and European trade items.

"We uncovered an iron ax from Fort Vancouver—the Hudson Bay Trading Post. This was the type of object used for trading with the Indians," Woodward noted.

Woodward conducted informal lectures and discussions at the digging sites. "It was learning by doing—and we all enjoyed it."

000

The median salary for federal workers in 1971 was \$9,092, almost 10 per cent higher than the 1970 figure.
