

Windows Help Block Energy Waste, Reduce Costs And Add Comfort

Poorly fitting windows and entrance doors are the largest source of heat leaks in a fully insulated home. It's combination of both heat transfer through glass, frame and sash members, and air-infiltration through gaps in weather-stripping. So, whether your home is insulated or not, you can cut heat loss through single glazed windows by 42% (more if existing windows are loose fitting) by installing Reynolds Aluminum Climate Guard thermally-improved windows and sliding glass doors.

They reduce heat loss through glass area with double glazing and insulating air space, and reduce air infiltration. They eliminate sticking wood sash, failing putty and frequent paint maintenance and have all the advantages of strong, lightweight, low maintenance aluminum, plus the Climate Guard thermal break which separates the inner and outer surfaces with an insulating material, thus reducing condensation. They are available in white or bronze factory-applied finishes as single-hung and horizontal sliding windows in all popular sizes. The sliding glass doors have tempered glass.

Aluminum Climate Guard Windows and Doors save energy and maintenance.
