

Healthy Water is ESSENTIAL for a Healthy Body

When chlorine is consumed in tap water, it destroys the natural microflora throughout the body, adversely affecting natural immunity and dramatically increasing the risk for immune disorders and cancer.

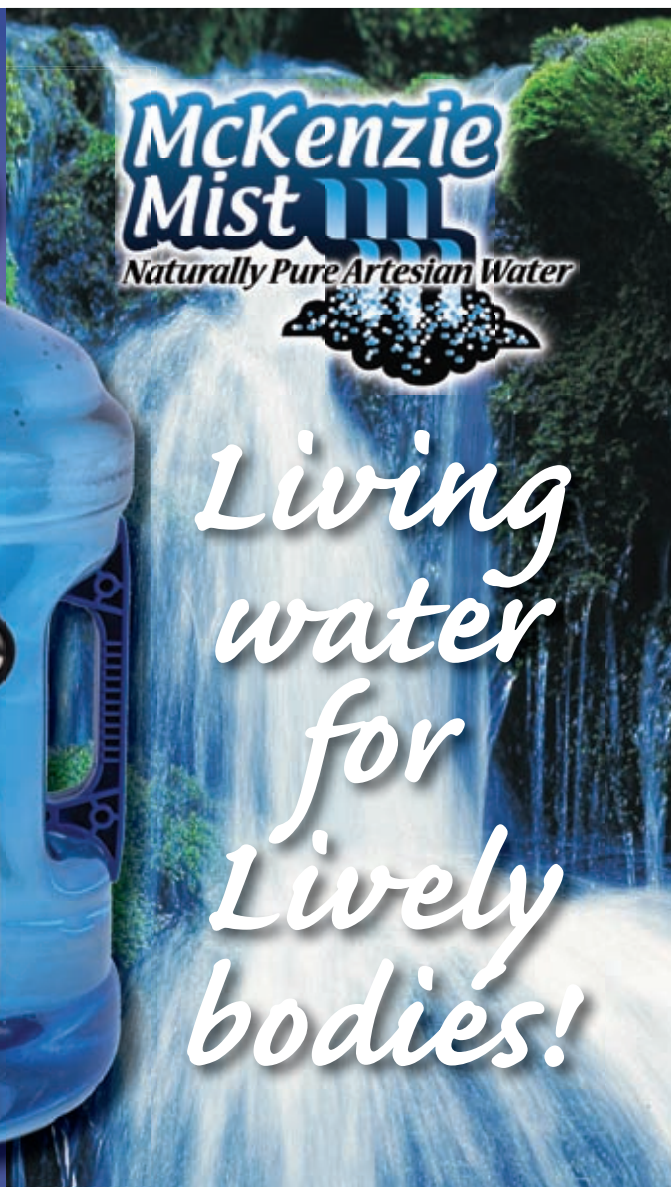

"Individuals who consume chlorinated drinking water have an elevated risk of cancer of the bladder, stomach, pancreas, kidney and rectum as well as Hodgkin's and non-Hodgkin's lymphoma." — Dr. Michael J. Plewa

The President's Council on Environmental Quality states "there is increased evidence for an association between rectal, colon and bladder cancer and the consumption of chlorinated drinking water."

Breast cancer affects **1** in every **8** women in North America. A Hartford, CT study found "women with breast cancer have 50–60% higher levels of chlorination byproducts in their breast tissue than women without breast cancer."

By law, municipal tap water is disinfected with chlorine—all the way to your faucet!

McKenzie Mist—Naturally Pure Artesian Water is bottled fresh daily—from our private and protected, 280-foot deep artesian well, located high in the Cascades—and is never treated with chlorine.
