## RECIPE 420

Recipe 420 is a special blend of ingredients hand selected specifically for the needs of professional flower growers. Our 100% natural & organic formula is carefully crafted to provide the ideal conditions for cut flower production. Recipe 420 is a blend of premium aged fir bark, coir, sphagnum peat moss, pumice, earthworm castings blended with seabird guano, crab meal, humic acids enhanced with mycorrhizal fungi and beneficial soil bacteria. We have worked hard to create a potting soil with excellent air filled pore space balanced with moisture retention for optimum root growth to support the most demanding floral crops.

While Recipe 420 is ready to use out of the bag, every grower has a unique fertilizer formula optimized for their specialized crops. Recipe 420 is compatible with a variety of fertilizer regimens. Recipe 420 contains beneficial soil microorganisms like mycorrhizal fungi. These organisms colonize the roots of most plants and become a natural extension of the root system. Mycorrhizal fungi help to enhance the absorption of many nutrients, as well as aiding in drought resistance and the reduction of transplant shock. We have also incorporated beneficial soil bacteria into our mix as well.

*Our unique formula is carefully blended using aged fir bark, coir, peat moss, pumice, earthworm castings and is fortified with seabird guano, crab meal, bat guano, fish bone meal and more. We have added beneficial micro organisms including Endo and Ecto Mycorrhizae as well as Streptomyces lydicus WYEC 108 to help ensure optimum results.*

*Premium aged fir bark, coir, sphagnum peat moss, pumice, and earthworm castings blended with seabird guano, crab meal, humic acids and enhanced with mycorrhizal fungi and beneficial soil bacteria.*
