Lead paint poisoning affects over one million children today.
Learning disabilities, hearing loss, speech delays, violent behavior and, in rare cases, seizures and even death: these are just some of the effects lead paint poisoning has on young children. If your home was built before 1978, lead paint on your walls, doors, windows and sills may be dangerous. And it's not just large paint chips that can cause damage. In fact, three granules of lead dust are enough to poison your child. Let's make all kids lead-free kids. To learn more about the simple steps you can take to safeguard your family, log on to LEADFREEKIDS.org or call 800-424-LEAD.
